NOTE.—All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation.    † Maximum thermometer not standard.    ‡ Minimum thermometer not standard.    § Exposed not standard.  
\* On other dates also    a indicates 1 day missing, b, 2 days, etc.    ° The state of sky at 8 a. m. not used in averages.

DAILY MAXIMUM AND MINIMUM TEMPERATURES DURING JULY, 1907.

[illegible]

\* At these stations thermometers are read in the morning; the maximum temperature then observed appears in the maximum column for the preceding day on which it nearly always occurs. 0, 100; 1, 101; 2, 102, etc.

† The data for Sundays and Mondays taken on Monday mornings and Monday evenings respectively.

## TOTAL PRECIPITATION FOR JULY, 1902.

## DAILY PRECIPITATION FOR SOUTH CAROLINA, JULY, 1907.

SOUTH CAROLINA SECTION,

J. W. BAUER, Section Director.

VOL. X. COLUMBIA, S. C., AUGUST, 1907.

No. 8.

## GENERAL SUMMARY.

The weather was devoid of any noteworthy or abnormal features during August.

The mean temperature averaged above the normal over the eastern portion of the State, and below the normal over the western portion. The first twenty days were generally cooler than usual, excepting a few days, at intervals during the first ten days, which were very warm. During the last ten-day period the daily mean temperatures were above the normal over the whole State. The mean temperature for the month averaged about normal.

Maximum temperatures of 90°, or higher, were recorded in the eastern division during the first eight days and generally in all parts of the State from the 21st to the end of the month. At a number of stations the highest temperatures were recorded on the 7th and 8th, but at the majority of stations from the 28th to the 31st, which was the hottest period of the month.

The minimum temperatures were recorded on the 4th and 5th and on the 26th, 27th, and 28th at the majority of stations tho a few recorded their minimum on other days.

In conformity with the usual distribution, the heaviest rainfall occurred in the eastern division, differing materially from the distribution in last year when the heaviest rainfall occurred in the Central Savannah Valley and in the extreme northwest portions.

The area of excessive precipitation included all of Williamsburg County, and parts only of the adjacent counties. The rainfall was below the normal over practically all of the western division. The rainfall was well distributed during the month excepting the last five days when only light and widely scattered showers occurred, and drouthy conditions developed in a few sections in the western division.

Thunderstorms were of frequent occurrence, tho no severe local storms were recorded.

There was considerable cloudiness during the first twenty days, but the sunshine was abundant during the remainder of the month, making the average sunshine nearly normal.

## TEMPERATURE.

The mean temperature for August, 1907, was 79.4°, which is 0.1° below the normal. The highest local mean was 81.8° at Blackville, the lowest was 73.9° at Greenville. The monthly extremes were 101° at Anderson, Blackville, and Walterboro on the 31st, and 54° at Walhalla on the 4th and 5th, making the State range 47°. The greatest monthly local range was 45° at Walhalla, the least was 24° at St.

George. The mean of the daily maximum temperatures was 89.5°, and of the daily minimum temperatures was 69.2°, making the average daily range 20.3°.

## PRECIPITATION.

The average precipitation was 5.41 inches, which is 0.12 of an inch below the normal. The greatest local monthly amount was 11.40 inches at Effingham, the least was 2.06 inches at Florence. The greatest 24-hour rainfall was 3.65 inches at Society Hill on the 6th. The average number of days with 0.01 of an inch, or more, precipitation was 9, ranging from 5 at Blairs to 20 at Summerville.

EXCESSIVE PRECIPITATION.—At Batesburg on the 18th, 1.68 inch in 50 minutes; at Beaufort on the 6th, 3.60 inches in 2 hours; at Blackville on the 19th, 2.70 inches in 3 hours and 20 minutes; at Bowman on the 2d, 1.78 inch in 45 minutes, and on the 17th, 2.12 inches in 1 hour and 30 minutes; at Columbia on the 22d, 1.46 inch in 1 hour; at Effingham on the 18th, 3.20 inches in 3 hours; at Newberry on the 15th, 2.71 inches in one hour; at Saint Stephens on the 23d, 1.44 inch in 30 minutes; at Smiths Mills on the 3d, 3.10 inches in 1 hour and 40 minutes, and on the 19th, 3.04 inches in 4 hours; at Society Hill on the 6th, 3.65 inches in 24 hours; at Stateburg on the 15th-16th, 2.59 inches in 24 hours; at Winthrop College on the 24th, 1.83 inch in 1 hour and 30 minutes.

## WIND.

The prevailing direction of the wind was from the southwest at 18 stations, from the west at 10 stations, from the south at 9 stations, from the northeast at 6 stations, from the east at 4 stations, from the north at 2 stations, and from the northwest at 1 station.

HIGH WINDS.—High winds were noted at Beaufort on the 2d; at Bowman, Camden, Little Mountain, on the 9th; at Charleston on the 18th; at Columbia on the 17th; at Trial on the 12th, 14th, 29th.

## SUNSHINE AND CLOUDINESS.

The average number of clear days was 13, of partly cloudy days was 13, and of cloudy days was 5.

## MISCELLANEOUS PHENOMENA.

HAIL.—At Smiths Mills on the 2d.

SOLAR HALOS.—At Liberty on the 13th.

LUNAR HALOS.—At Beaufort on the 16th; at Santuc on the 25th.

DENSE FOGS.—At Camden on the 13th, 17th, 30th; at Columbia on the 15th; at Greenville on the 3d; at Liberty on the 7th, 10th, 16th, 23d; at Newberry, Winthrop College on the 23d; at Saluda on the 3d, 4th; at Santuc on the 13th, 14th, 18th; at Society Hill on the 12th, 13th, 14th; at Stateburg on the 31st; at Trial on the 20th, 27th.

THUNDERSTORMS.—Thunderstorms occurred on 31 days. There were five periods of maximum frequency, namely on the 2d-3d, 8th-11th, 14th-18th, 22d-24th, and on the 29th, when from five to thirteen of the twenty cooperative stations that recorded thunderstorms reported their occurrence. They were comparatively infrequent on the 4th, 5th, 6th, 13th, 20th, 21st, 25th, 26th, 27th, 28th, 30th, and 31st, when from one to four only of the twenty stations reported their occurrence.

## REMARKS BY OBSERVERS.

BEAUFORT.—The month was not as warm as August usually is, but the rainfall was slightly greater. The excessive rainfall on the 6th was local.—Sidney M. Benton. BOWMAN.—The temperature was remarkably uniform thruout the month. The most severe thunderstorm of the season came from the northeast, an unusual direction.—B. O. Evans. HEATH SPRING.—Showers were of frequent occurrence during the first and second decades; there was no rain from the 25th to the 31st inclusive.—J. A. Weaner. LIBERTY.—The weather conditions were nearly normal thruout the month, except that, owing to the absence of rain from the 25th to the 31st, the soil became dry by the end of the month.—Jno. T. Boggs. SANTUC.—The precipitation was ample during the first half of the month, but during the second half the rainfall was very light and the heat was excessive causing droughty conditions.—E. W. Jeter. SUMMERVILLE.—Thunderstorms occurred on twenty days, and each storm was accompanied by a measurable amount of rain. The relative humidity for the month was

83 per cent.—Miss E. H. Gadsden. TRENTON.—The precipitation was much below the normal, and since January 1st is 10.27 inches less than the average for the first eight months of the year.—A. C. Long.

NOTE. — All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. † Maximum thermometer not standard. ‡ Exposed not standard.  
\* On other dates also a indicates 1 day missing b, 2 days, etc. § The state of sky at 8 a.m. not used in averages.

ERRATA.

The following changes should be made in the June, 1907, number of the Monthly Report: On page 45, the minimum at Summerville 53 on the 3d, should be 55 on the 3d. On pages 45 and 48, the total precipitation at Clarks Hill 5.27, should be 4.95; at Dillon 6.55, should be 6.75; at Satula 4.30, should be 4.28; at Yemassee 6.12, should be 6.32.  
The following changes should be made in the July number of the Monthly Report: On page 53, total precipitation at Georgetown 7.66, should be 8.66; the monthly mean temperature at Heath Spring 83.0, should be 83.8; at Stateburg 81.7, should be 81.5; at Winthrop College 79.8, should be 80.2; at Yemassee 70.8, should be 81.0. On page 54, the mean maximum temperature at Stateburg 91.2, should be 90.8; at Winthrop College, the maximum temperature on the 2d 81, should be 91; on the 16th 80, should be 90; on the 19th 83, should be 93; and the mean maximum temperature 90.1, should be 91.0; the mean minimum temperature at Yemassee 70.1, should be 72.4. On page 56, the precipitation at Georgetown on the 14th 0.10, should be 1.00, and the total should be 8.66.

DAILY MAXIMUM AND MINIMUM TEMPERATURES DURING AUGUST, 1907.

[illegible]

The data for Sundays and Mondays taken on Monday mornings and Monday evenings respectively.

TOTAL PRECIPITATION FOR AUGUST, 1907.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR SEPTEMBER, 1907.

U. S. DEPARTMENT OF AGRICULTURE,  
**CLIMATOLOGICAL SERVICE**  
OF THE  
**WEATHER BUREAU.**  
CENTRAL OFFICE: WASHINGTON, D. C.  
  
SOUTH CAROLINA SECTION,  
J. W. BAUER, Section Director.

VOL. X. COLUMBIA, S. C., SEPTEMBER, 1907. No. 9.

GENERAL SUMMARY.

The weather was warm and seasonable thruout the month with the exception of a short cool period near the close of the month when the temperature was much below normal for one day only. Maximum temperatures of 90°, or above, occurred in all parts of the State save in the extreme north-western portion, but rarely after the middle of the month in the central and western portions. The dates of occurrence of the highest temperatures were confined to the first three days except at a few stations mostly in the eastern portion where the 8th and 9th were the warmest days. Minimum temperatures were neither unusually high nor low.

The precipitation was below the average in small areas located in the western and middle Savannah Valley counties, and along the southern portion of the immediate coast; and was above the average over the rest of the State. The areas of heaviest precipitation included the southeastern counties except along the coast, and the extreme eastern counties. The precipitation was well distributed thruout the month.

Thunderstorms were unusually numerous especially during the first half of the month.

The sunshine was generally deficient from the 10th to the 20th, and was slightly above the normal during the first and the last decades.

TEMPERATURE.

The mean temperature was 76.0°, which is 1.8° above the normal. The highest local mean was 79.4° at Charleston, the lowest was 69.7° at Greenville. The monthly extremes of temperature were 99° at Saluda on the 3d, and 45° at Walhalla on the 26th, making the State range 54°. The greatest local monthly range was 50° at Walhalla, the least was 26° at Charleston. The mean of the daily maximum temperatures was 85.8°, and of the daily minimum temperatures was 66.2°, making the average daily range 19.6°.

PRECIPITATION.

The average precipitation was 5.91 inches, which is 1.86 inch above the normal. The greatest local monthly amount was 10.02 inches at Blackville, the least was 2.73 inches at Charleston. The greatest 24-hour fall was 7.00 inches at Pinopolis on the 28th. The average number of days with rain was 9, ranging from 3 days at Clemson College and Georgetown to 15 days at Summerville.

EXCESSIVE PRECIPITATION.—At Blackville on the 4th, 1.40 inch in 40 minutes, and on the 28th-29th, 3.15 inches in 17 hours; at Bowman on the 29th, 3.78 inches in about

12 hours; at Catawba on the 22d, 3.02 inches in 6 hours; at Conway on the 29th, 3.80 inches in 24 hours; at Florence on the 29th, 2.66 inches in about 16 hours; at Greenville on the 23d, 3.02 inches in about 15 hours; at Liberty on the 23d, 2.60 inches in 24 hours; at Pelzer on the 23d, 2.90 inches in 13 hours and 15 minutes; at Pinopolis on the 28th-29th, 7.00 inches in 24 hours; at St. George on the 29th, 4.35 inches in 24 hours; at St. Matthews on the 29th, 3.20 inches in 13 hours; at Smiths Mills on the 29th, 5.20 inches in 17 hours; at Santuc on the 29th, 2.51 inches in 24 hours; at Trial on the 28th, 3.70 inches in about 15 hours; at Walterboro on the 29th, 3.25 inches in 24 hours; at Yemassee on the 29th, 4.75 inches in about 17 hours; at Yorkville on the 23d, 2.52 inches in 24 hours.

WIND.

The prevailing direction of the wind was from the south at 12 stations, from the southwest at 11 stations, from the east at 7 stations, from the northeast and southeast at 5 stations each, from the west at 4 stations, and from the north and the northwest at 1 station each.

HIGH WINDS.—At Beaufort and Summerville on the 23d; at Camden on the 4th, 23d; at Charleston on the 29th; at Columbia on the 9th; at Trial on the 3d, 23d, 28th.

SUNSHINE AND CLOUDINESS.

The average number of clear days was 13, of partly cloudy days was 11, and of cloudy days was 6.

MISCELLANEOUS PHENOMENA.

METEOR.—At Santuc on the 6th.  
SOLAR HALOS.—At Charleston on the 25th; Santuc on the 26th.

LUNAR HALOS.—At Liberty on the 26th; Santuc on the 7th, 26th.

DENSE FOGS.—At Bennettsville, Bowman on the 20th, 21st; at Camden on the 10th, 19th, 20th; at Clarks Hill on the 24th; at Columbia on the 6th, 19th, 20th; at Heath Spring, Winthrop College on the 20th; at Liberty on the 22d, 29th; at Newberry on the 2d, 4th, 12th, 19th, 20th; at Santuc on the 2d; at Trial on the 5th.

THUNDERSTORMS.—Thunderstorms occurred on 24 days. There were four periods of maximum frequency, namely, 1st-5th, 8th-14th, 19th-23d, and 25th-29th, when from 3 to 12 of the 15 cooperative stations that recorded thunderstorms reported their occurrence. They were comparatively infrequent on the 2d, 6th, 7th, 9th, 19th, 20th, 21st, 25th, 26th, 27th, and 29th, when only one or two stations reported their occurrence. None were reported on the 15th-18th, 24th, or 30th.

## REMARKS BY OBSERVERS.

BEAUFORT.—The temperature was above the normal and the precipitation was below normal. The precipitation was well distributed but the rains were light until the 28th when 1.62 inch fell in three hours.—S. M. Benton. BOWMAN.—The total rainfall was unusually large; highways were badly washed and the heavy rains did considerable damage otherwise. The number of thunderstorms was exceptionally large.—B. O. Evans. CAMDEN.—The weather was unfavorable owing to the exceptionally large rainfall which was nearly twice the average amount.—J. B. Mickle. GREENVILLE.—There were thunderstorms on the 4th and 8th with very vivid lightning.—Mrs. S. A. Crittenden. LIBERTY.—The weather was unfavorable. The precipitation was well distributed but was in excess of the soil requirements.—John T. Boggs. NEWBERRY.—There was a severe thunderstorm on the night of the 7th.—W. G. Peterson. SANTUC.—The month was a rainy one, with excessive precipitation at times. There were frequent high winds accompanying thunderstorms that attained almost tornadic force.—E. W. Jeter. TRENTON.—The precipitation was excessive, and the total is now 9.60 inches less than the average for the first 9 months of the year.—C. A. Long.

## ERRATA.

In the August number of the Monthly Report the following corrections should be made: On page 61, the highest temperature and date at Winthrop College 93° on the 31st, should be 96° on the 9th; the total precipitation at Spartanburg 4.09, should be 4.08. On page 64, the precipitation at Spartanburg on the 16th 0.90, should be 0.99, and the total 4.09, should be 4.08.

J. W. BAUER, Section Director.

VOL. X. COLUMBIA, S. C., OCTOBER, 1907. No. 10.

GENERAL SUMMARY.

The month was much cooler than the average. The mean temperature was nearly as low as the lowest of record. The monthly averages ranged from about 1° to over 5° below the normal. The highest temperatures occurred generally during the first ten days. Maximum temperatures of 90°, or above, were recorded at 3 out of the 44 stations, at two stations on the 7th and one station on the 8th. Minimum temperatures of 32°, or below, occurred at 13 of the 44 stations.

There were two cool periods during the month. The first, from the 13th to the 17th, caused the first light frosts of the season in all, except the extreme southern, portions and heavy frosts in the central and western portions. The second cool period began on the 29th and continued to the 31st. The first killing frost of the season occurred in many places on the 29th, but the killing frosts were not general, having occurred principally on low, moist lands.

The precipitation was unusually light, and was below the normal over the whole State. The monthly amounts were less than an inch at the majority of stations, the extreme southern and the extreme northwestern portions only having received amounts of one inch or more. The departures from the normals ranged from an inch and a half to over four inches. There were general rains on the 8th-9th and 27th-28th, and widely scattered showers occurred on the 4th-5th, 20th, and 31st.

The prevailing winds were, as usual, from the northeast. Generally abundant sunshine prevailed thruout the month. No floods or high waters occurred in any of the rivers.

TEMPERATURE.

The mean temperature was 61.2°, which is 2.3° below the normal. The highest local mean was 65.2° at Beaufort, the lowest was 55.7° at Greenville. The monthly extremes of temperature were 91° at Walterboro on the 7th, and 28° at Aiken on the 29th, making the state range 63°. The greatest local monthly range was 61° at Saluda, the least was 44° at Charleston and at Clemson College. The mean of the daily maximum temperatures was 72.9°, and of the daily minimum temperatures was 49.5°, making the average daily range 23.4°.

PRECIPITATION.

The average precipitation was 0.73 of an inch, which is 2.40 inches below the normal. The greatest local monthly amount was 2.32 inches at Beaufort, the least was none at Aiken. The greatest 24-hour fall was 1.93 inch at Beaufort on the 9th. The average number of days with rain

was 3, ranging from none at Aiken to 5 days at Kingstree, Summerville, and Walterboro.

EXCESSIVE PRECIPITATION.—None occurred.

WIND.

The prevailing direction of the wind was from the northeast at 11 stations, from the north at 9 stations, from the northwest at 8 stations, from the southwest at 6 stations, from the east and the west at 5 stations each, from the south at 2 stations, and from the southeast at 1 station.

HIGH WINDS.—At Camden on the 28th; at Charleston on the 31st; at Columbia on the 29th.

SUNSHINE AND CLOUDINESS.

The average number of clear days was 19, of partly cloudy days was 7, and of cloudy days was 5.

MISCELLANEOUS PHENOMENA.

SOLAR HALOS.—At Charleston on the 20th.

LUNAR HALOS.—At Charleston, Columbia on the 20th; at Greenville on the 16th; at Liberty on the 14th, 19th; at Winthrop College on the 30th.

DENSE FOGS.—At Beaufort on the 18th, 20th, 27th; at Camden on the 20th, 27th; at Trial on the 20th, 26th, 27th.

THUNDERSTORMS.—Thunderstorms occurred on four days. Three stations, in the eastern division, reported their occurrence on the 8th, and one on the 9th. Three stations, in the central counties, on the 27th, and one on the 28th.

FROSTS, LIGHT.—The first light frost of the season was reported as follows: On the 11th at Anderson, Liberty, Newberry, Pelzer; on the 12th at Greenville; on the 13th at Clarks Hill, Greenwood; on the 14th at Blackville, Columbia, Georgetown, Santuc, Spartanburg, Trenton, Walterboro, Winthrop College, Yorkville; on the 15th at Catawba, Charleston, Cheraw, Heath Springs, St. George, Smiths Mills, Society Hill, Summerville, Trial; on the 29th at Beaufort.

FROSTS, KILLING.—The first killing frosts of the season occurred on the 15th at Heath Springs, Newberry; on the 29th at Stateburg, Blackville, Catawba, Columbia, Greenwood, Kingstree, Santuc, Trenton, Yemassee; on the 30th at Cheraw; on the 31st at Trial.

## REMARKS BY OBSERVERS.

BATESBURG.—The month was noteworthy for its small rainfall. The frost on the 14th was killing on low, moist lands; on high lands and where the soil was dry the frost did little damage. On the 29th the frost was generally killing.—E. J. Hite. BEAUFORT.—With the exception of 1891, this was the coolest October of record. The prevailing weather was clear and dry.—S. M. Benton. CAMDEN.—The weather was favorable. The precipitation was unusually light.—J. B. Mickle. LIBERTY.—All summer crops were killed by frosts on low lands; on high lands the frosts did very little damage.—Jno. T. Boggs. NEWBERRY.—The month was very dry and favorable for farm work.—W. G. Peterson. SANTUC.—The weather was clear, or partly cloudy, during the greater portion of the month. The precipitation was very light until the 27th, and the air was very dusty.—E. W. Jeter. SOCIETY HILL.—With the exception of 1901, this was the driest October of record, since 1892. The weather was favorable for harvesting.—Maj. J. J. Lucas. STATEBURG.—There was no frost during the month severe enough to kill tender vegetation except on low lands.—W. W. Anderson, M. D. SUMMERVILLE.—The average relative humidity was 50 per cent. There were heavy dews during the latter portion of the month.—Miss E. H. Gadsden. TRENTON.—The total precipitation since January 1st is 12.66 inches below the normal for the same period.—C. A. Long.

## ERRATA.

The following changes should be made in the September, 1907, number of the Monthly Report, namely: On page 69, at Aiken, the highest temperature and date, 94 on the 1st, should be 96 on the 3d; at Cheraw, the highest temperature and date, 91 on the 9th, should be 93 on the 4th; at Saluda, the monthly mean temperature 76.0, should be 75.8, and the total precipitation 5.84, should be 5.44. On

page 70, at Saluda, the minimum temperature on the 4th 76, should be 69, and the monthly mean temperature 64.5, should be 64.2. On page 72, at Saluda, the total precipitation 5.84, should be 5.44.

NOTE. — All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. † Maximum thermometer not standard. ‡ Minimum thermometer not standard. § Exposed not standard.  
\* On other dates also a indicates 1 day missing, b, 2 days, etc. † The state of sky at 8 a. m. not used in averages.

LITATION.

[illegible]

\* At those stations thermometers are read in the morning; the maximum temperature then observed appears in the maximum column for the preceding day on which it nearly always occurs. The data for Soudan and Mekele are from 1955.

The data for Sundays and Mondays taken on Monday mornings and Monday evenings respectively,

# TOTAL PRECIPITATION FOR OCTOBER, 1907.

## DAILY PRECIPITATION FOR SOUTH CAROLINA, OCTOBER, 1907.

MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR NOVEMBER, 1907.

U. S. DEPARTMENT OF AGRICULTURE,

## CLIMATOLOGICAL SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION,

J. W. BAUER, Section Director.

VOL. X. COLUMBIA, S. C., NOVEMBER, 1907. No. 11.

## GENERAL SUMMARY.

The month was colder than the average in all portions of the State. On the immediate coast the monthly mean temperature was but slightly below the normal; the departures from the normal increased regularly to about  $5^{\circ}$  in the extreme northwestern portion. There were two unusually warm periods. During the first period, from the 7th to the 9th, the highest temperatures for the month were recorded at nearly all the stations in the western and central portions, while in the coast regions the highest temperatures occurred from the 21st to the 23d. The greatest positive departures from the normal occurred during this period. The coldest portion of the month was the middle of the second decade when freezing temperatures and killing frosts occurred in all portions of the State and thin ice was recorded to within a few miles of the coast. The extreme southern portion of the State averaged nearly  $12^{\circ}$  warmer than the extreme northwestern or mountain portion.

The precipitation was well distributed thruout the month into four general rainy periods. During the first period, at the beginning of the month, and the second period, at the beginning of the second decade, the rainfall was light in all parts of the State. The longest rainy spell began on the 18th and ended on the 24th, with heavy rainfall in the central and western counties, causing high water in all the rivers of those sections and floods in the Wateree river and its confluent branches. During the fourth period, near the close of the month, the rainfall was moderately heavy in all parts of the State. The rainfall for the month was deficient in the coast regions; it was almost normal in the central counties, and was in excess of the average in the western counties. With the exception of a trace of sleet on the 12th and a trace of snow on the 18th, the precipitation for the month was all in the form of rain.

The sunshine was about normal during the first two decades, but there was a general excess of cloudiness during the third decade.

## TEMPERATURE.

The mean temperature was  $52.2^{\circ}$  which is  $1.9^{\circ}$  below the normal. The highest local mean was  $58.0^{\circ}$  at Charleston, the lowest was  $45.0^{\circ}$  at Greenville. The monthly extremes of temperature were  $87^{\circ}$  at Anderson on the 5th, and  $24^{\circ}$  at Dillon on the 14th and at Saluda on the 15th, making the State range  $63^{\circ}$ . The greatest local monthly range was  $60^{\circ}$  at Anderson, the least was  $40^{\circ}$  at Charleston. The mean of the daily maximum temperatures was  $62.7^{\circ}$ , and of the daily minimum temperatures was  $41.7^{\circ}$ , making the average daily range  $21.0^{\circ}$ .

## PRECIPITATION.

The average precipitation was 4.13 inches, which is 1.32 inch above the normal. The greatest local monthly amount was 8.25 inches at Greenwood, the least was 1.22 inches at Charleston. The greatest 24-hour fall was 2.55 inches at Greenwood on the 21st-22d. The average number of days with rain was 10, ranging from 5 at Georgetown to 14 at Calhoun Falls and at Little Mountain.

EXCESSIVE PRECIPITATION.—At Greenwood on the 21st-22d, 2.55 inches in 24 hours.

## WIND.

The prevailing direction of the wind was from the northeast at 16 stations, from the north at 11 stations, from the east at 6 stations, from the northwest at 5 stations, from the west at 4 stations, and from the south and the southwest at 3 stations each.

HIGH WINDS.—High winds were reported from Beaufort, Bowman, Charleston, Cheraw, Clarks Hill, Newberry and Saluda on the 6th; at Camden and Columbia on the 2d, 6th; at Spartanburg on the 7th; at Trial on the 6th, 7th.

## SUNSHINE AND CLOUDINESS.

The average number of clear days was 12, of partly cloudy days was 7, and of cloudy days was 11.

## MISCELLANEOUS PHENOMENA.

SNOW.—A trace of snow was recorded at Greenville on the 18th.

SLEET.—Sleet was recorded at Greenville and Liberty on the 12th; at Summerville on the 13th.

LUNAR HALOS.—Lunar halos occurred at Blackville on the 9th; at Charleston on the 21st; at Winthrop College on the 16th, 20th.

SOLAR HALOS.—Solar halos occurred at Beaufort on the 25th; at Camden on the 17th; at Charleston on the 5th, 17th, 23d.

DENSE FOGS.—Dense fogs of one hour, or longer duration occurred at Beaufort on the 21st, 22d, 23d; at Blackville, Winthrop College on the 22d; at Camden on the 18th, 23d; at Charleston on the 21st, 22d; at Columbia on the 10th, 11th, 25th; at Georgetown on the 22d, 23d; at Liberty on the 13th, 19th; at Stateburg on the 6th, 18th, 26th; at Trial on the 11th, 23d, 24th, 25th, 26th, 27th.

THUNDERSTORMS.—Thunderstorms occurred on five days and were recorded at 9 out of the 46 stations; on the 9th in the northwestern counties and on the 21st, 22d, 23d, in the north central counties.

KILLING FROSTS.—The first killing frost of the season was recorded at Saluda and Spartanburg on the 4th; at Bennettsville on the 8th; at Blackville, Georgetown, Winnsboro on the 13th; at Aiken, Allendale, Anderson, Batesburg, Beaufort, Blairs, Bowman, Calhoun Falls, Camden, Chappels, Charleston, Clarks Hill, Clemson College, Conway, Dillon, Edisto, Effingham, Florence, Greenville, Liberty, Little Mountain, Pelzer, Pinopolis, St. George, St. Matthews, Smiths Mills, Society Hill, Summerville, Walhalla, Walterboro, Winthrop College, Yorkville on the 14th.

## REMARKS BY OBSERVERS.

BEAUFORT.—The deficiency in precipitation since January 1st is 5.43 inches. — S. M. Benton. BOWMAN.—The month was noteworthy for an unusual number of killing frosts and for several days with unseasonably cold weather. — B. O. Evans. GREENVILLE.—Tho some ice formed on the 3d, vegetation was not killed until the 14th when thick ice formed. There was a slight fall of sleet on the 12th and a light fall of snow on the 18th, the latter melting as it fell.—Mrs. S. A. Crittenden. LIBERTY.—The entire month was wet and hindered farmwork.—Jno. T. Boggs. SANTUC.—The month was very wet, 7.06 inches of precipitation having fallen, and this is the heaviest November rainfall in the last 14 years; the month was also unusually cool.—E. W. Jeter. SUMMERVILLE.—The mean relative humidity for the month was 81 per cent. High south-westerly winds prevailed on the 6th; frost on the 8th, and sleet fell on the 13th. The first ice of the season was noted on the 14th, as well as a killing frost that covered everything with a heavy deposit, and giving the appearance of a light snowfall.—Miss E. H. Gadsden. STATEBURG.—The

frost of the 16th was only killing in places on high hills and on elevated lands generally tho killing on low lands where killing frosts had already occurred in October.—W. W. Anderson, M. D. TRENTON.—The deficiency in precipitation since January 1st is 13.51 inches for the 11 months ending November 30th.—C. A. Long.

NOTE. — All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. † Maximum thermometer not standard. ‡ Minimum thermometer not standard. § Exposed not standard. \* On other dates also. a indicates 1 day missing, b, 2 days, etc. ° The state of sky at 8 a. m. not used in averages. b Three days record of minimum temperatures missing.

ERRATA.

The following corrections should be made in the October, 1907, number of the Monthly Report: On page 77, at Conway the maximum and date 86 on the 4th, should be 87 on the 8th; at Saluda, the monthly mean temperature 61.0, should be 60.8; at St. Matthews, the monthly mean temperature 62.8, should be 60.4. On page 78, at Saluda, the minimum on the 10th, 62, should be 53 and the monthly mean minimum should be 47.1; at St. Matthews, the monthly mean minimum 55.2, should be 50.5.

\* At these stations thermometers are read in the morning; the maximum temperature then observed appears in the maximum column for the preceding day on which it nearly always occurs.

\* The data for Sundays and Mondays taken on Monday mornings and Monday evenings respectively.

# TOTAL PRECIPITATION FOR NOVEMBER, 1907.

## DAILY PRECIPITATION FOR SOUTH CAROLINA, NOVEMBER, 1907.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR DECEMBER, 1907.

(Arrows fly with the wind.)

U. S. DEPARTMENT OF AGRICULTURE,

## CLIMATOLOGICAL SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION,

J. W. BAUER, Section Director.

VOL. X. COLUMBIA, S. C., DECEMBER, 1907. No. 12.

## GENERAL SUMMARY.

The monthly mean temperature for the whole State averaged about normal. In the eastern half, the mean temperature was considerably in excess of the normal, and in the western half there was a marked deficiency in temperature. Unusually high temperatures prevailed from the 8th to the 10th, when the highest temperatures of the month were recorded at a number of stations in the eastern and central counties. The temperature was above the seasonal average from the 22nd to the 31st, and at a majority of the stations the highest temperatures of the month were recorded on the 30th.

The month was unusually cool from the 1st to the 7th. In the western, northern and northeastern border counties minimum temperatures below 20° were recorded on the 5th, and over the rest of the State minimum temperatures below 32° were recorded on the same day.

The precipitation was above the normal over practically the whole State. The heaviest rainfall occurred in the extreme northwestern portions, the amounts decreasing regularly to the central counties; over the eastern half of the State the amounts differed but little at the various stations.

The rainfall was over three inches in all portions, and over eight inches in parts of York, Spartanburg, Cherokee, Greenville, Pickens and Oconee counties. The heaviest rains occurred after the 15th and caused three successive floods in the principal rivers.

Snow fell on the 4th over the central and northern counties. No snow was recorded south of a line drawn from Aiken to Conway. The snow melted as it fell in the central counties, and accumulated on the ground to a depth of from two to over three inches in the mountain districts.

The sunshine was slightly above the average amount during the fore part of the month and was considerably below the normal during the latter portion.

## TEMPERATURE.

The mean temperature was 46.2° which is exactly normal. The highest local mean was 51.8° at Beaufort, the lowest was 41.3° at Greenville. The monthly extremes of temperature were 75° at Blackville on the 25th and 31st, and at Georgetown and Walterboro on the 30th, and 12° at Liberty on the 5th, making the State range 63°. The greatest local monthly range was 55° at Walterboro, the least was 40° at Charleston. The mean of the daily maximum temperatures was 56.2°, and of the daily minimum temperatures was 36.2°, making the average daily range 20.0°.

## PRECIPITATION.

The average precipitation was 5.81 inches, which is 2.11 inches above the normal. The greatest local monthly amount was 8.70 inches at Yorkville, the least was 3.11 inches at Smiths Mills. The greatest 24-hour rainfall was 3.19 inches at Yemassee on the 14th. The average number of days with rain was 10, ranging from 5 days at Georgetown, Kingstree and Smiths Mills, to 15 days at Cheraw, Columbia, and Summerville.

EXCESSIVE PRECIPITATION.—At Calhoun Falls on the 22d-23d, 2.74 inches in 12 hours, 40 minutes; at Spartanburg on the 22d, 2.50 in 6 hours; at Walterboro on the 14th, 2.62 in 24 hours; at Yemassee on the 14th, 3.19 inches in 24 hours.

SNOW.—The average fall for the State was 0.5 of an inch. The greatest depth was 3.0 inches at Liberty on the 4th.

## WIND.

The prevailing direction of the wind was from the west at 19 stations, from the southwest at 12 stations, from the northwest at 5 stations, from the northeast at 4 stations, from the south at 3 stations, and from the north and the east at 2 stations each.

HIGH WINDS.—At Beaufort on the 4th, 10th, 13th, 22d; at Bowman on the 4th, 13th, 14th; at Camden on the 3d, 10th, 13th, 15th, 23d, 30th; at Charleston on the 13th; at Columbia and Winthrop College on the 23d; at Liberty on the 3d, 23d; at Newberry on the 23d, 30th; at Summerville on the 13th, 14th; at Trial on the 9th.

## SUNSHINE AND CLOUDINESS.

The average number of clear days was 14, of partly cloudy days was 7, and of cloudy days was 10.

## MISCELLANEOUS PHENOMENA.

AURORA.—At Beaufort on the 1st.

SOLAR HALOS.—At Beaufort on the 11th; at Stateburg on the 7th.

SLEET.—At Bowman on the 20th; at Liberty on the 24th; at Trial on the 4th.

LUNAR HALOS.—At Beaufort, Columbia on the 18th; at Charleston on the 12th; at Saluda on the 28th; at Winthrop College on the 13th, 27th.

THUNDERSTORMS.—At Beaufort on the 22d; at Charleston on the 30th; at Little Mountain, Newberry on the 29th; at Santuc on the 14th.

SNOW.—At Camden, Clarks Hill, Clemson College, Columbia, Conway, Due West, Greenville, Liberty, Little Mountain, Newberry, Pelzer, Saluda, Spartanburg, Stateburg, Winthrop College on the 4th; at Cheraw, Kingstree on the 5th; at Bowman on the 20th.

DENSE FOGS.—At Beaufort on the 28th, 29th; Charleston, Columbia, Greenville, Trial on the 29th; at Liberty on the 9th, 28th, 29th; at Stateburg on the 19th, 29th; at Winthrop College on the 15th, 25th, 29th; at Yorkville on the 25th, 29th, 30th.

## REMARKS BY OBSERVERS.

BEAUFORT.—The mean temperature was slightly below the normal and the precipitation was much above normal. The mean temperature for the entire year was slightly

above the normal, and the precipitation was below the normal.—S. M. Benton. **BOWMAN.**—The first week was quite cold; the remainder of the month had moderate temperature. There were frequent rains, and some heavy rain-falls, after the 10th.—B. O. Evans. **HEATH SPRINGS.**—The temperature was about normal, the precipitation was above normal.—J. A. Weaner. **LIBERTY.**—The month was wet and unfavorable for farm work. The temperature was below the normal, generally, except during the last week which was unusually warm; frogs were heard and distant lightning observed.—John T. Boggs. **NEWBERRY.**—The month was unusually wet.—W. G. Peterson. **SANTUC.**—The month was very wet with some heavy rains. There were many clear mornings with unusually heavy frost deposits.—E. W. Jeter. **SUMMERVILLE.**—The percentage of relative humidity for the month was 79 per cent.—Miss E. H. Gadsden. **TRENTON.**—The total precipitation for the year was 8.60 inches below the normal.—C. A. Long.

MONTHLY MEAN TEMPERATURE AND PRECIPITATION, WINTER 1961, JANUARY, 1962

U. S. DEPARTMENT OF AGRICULTURE,

## CLIMATOLOGICAL SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION,

J. W. BAUER, Section Director.

VOL. XI. COLUMBIA, S. C., JANUARY, 1908. No. 1.

## GENERAL SUMMARY.

Temperature extremes were within the usual January limits. Maximum temperatures from  $70^{\circ}$  to  $76^{\circ}$  were recorded at seven stations, and all, except one, occurred in the eastern portion of the State. In other portions the maximum temperatures ranged from  $62^{\circ}$  to  $69^{\circ}$ . Freezing temperatures occurred over the entire State; the number of days with freezing temperatures ranging from three days in the coast regions to twenty days in the northwestern portion. The temperature was generally above the normal during the first week and on the first three days of the third decade when the highest temperatures of the month were recorded at all stations. The only cold wave of the month occurred on the 23d and 24th when the lowest temperatures were generally recorded.

The precipitation was heavy during the fore part of the month, causing floods in the principal rivers, and was light from the 12th to the 30th. On the 31st heavy precipitation occurred over the entire State, as mixed snow, sleet and rain in the northwestern portion, the rain freezing as it fell. In the eastern and southern portions the precipitation was all in the form of rain; in the western division a considerable portion was in the form of snow and sleet, generally melting as it fell. The rainfall was well distributed tho lightest in the extreme eastern portion where it was slightly below the normal; the rainfall was heaviest in the mountain districts.

There was excessive cloudiness during the first decade; the remainder of the month received more than the usual amount of sunshine. The prevailing winds were generally westerly.

## TEMPERATURE.

The mean temperature was  $44.2^{\circ}$  which is  $0.3^{\circ}$  above the normal. The highest local mean was  $50.4^{\circ}$  at Beaufort, the lowest was  $39.5^{\circ}$  at Greenville. The monthly extremes of temperature were  $76^{\circ}$  at Walhalla on the 23d, and  $17^{\circ}$  at Anderson on the 24th and at Dillon and Heath Springs on the 25th, making the State range  $59^{\circ}$ . The greatest local monthly range was  $57^{\circ}$  at Walhalla, the least was  $40^{\circ}$  at Charleston. The mean of the daily maximum temperatures was  $54.5^{\circ}$ , and of the daily minimum temperatures was  $33.9^{\circ}$ , making the average daily range  $20.6^{\circ}$ .

## PRECIPITATION.

The average precipitation was 4.86 inches, which is 1.33 inch above the normal. The greatest local monthly amount was 7.53 inches at Clemson College, the least was 2.49 inches at Charleston. The greatest 24-hour rainfall was 2.75 inches at St. Matthews on the 11th-12th. The average number of days with rain was 9, ranging from 3 days at Catawba, Chappells, Ferguson, Florence and St. George to 14 days at Summerville.

EXCESSIVE PRECIPITATION.—At Allendale on the 27th, 2.70 inches in 24 hours; at Greenville on the 11th-12th, 2.57 inches in 24 hours; at St. Matthews on the 11th-12th, 2.75 inches in 21 hours.

## WIND.

The prevailing direction of the wind was west at 15 stations, northwest at 10 stations, southwest at 9 stations, north and northeast at 5 stations each, and east and south at 2 stations each.

HIGH WINDS.—At Batesburg on the 26th, 27th; at Beaufort on the 13th, 24th, 26th, 31st; at Blackville on the 31st; at Bowman on the 7th, 10th, 11th, 12th, 13th, 23d, 27th, 31st; at Camden on the 7th, 8th, 11th, 12th, 13th, 23d, 24th, 26th, 31st; at Charleston on the 12th; at Cheraw on the 24th; at Clarks Hill on the 8th; at Columbia on the 12th, 26th; at Georgetown on the 7th, 12th, 23d, 26th; at Greenville, Spartanburg on the 26th; at Liberty on the 11th, 12th, 23d, 24th, 27th; at Newberry on the 13th, 23d, 26th; at Saluda on the 27th; at Society Hill on the 7th, 23d, 26th; at Summerville on the 6th, 7th, 8th, 12th, 26th, 27th; at Trial on the 11th, 12th, 23d, 24th, 25th, 26th, 27th; at Walhalla on the 23d; at Yorkville on the 12th, 13th, 26th.

## SUNSHINE AND CLOUDINESS.

The average number of clear days was 13, of partly cloudy days was 8, and of cloudy days was 10.

## MISCELLANEOUS PHENOMENA.

LUNAR HALOS.—At Camden and Greenville on the 15th; at Columbia on the 15th, 21st; at Liberty on the 16th; at Santuc on the 16th, 21st, 25th; at Winnsboro on the 21st, 22d.

HAIL.—Hail occurred at Blackville and Society Hill on the 11th; at Cheraw on the 12th, 27th; at Heath Springs, Santuc, and Spartanburg on the 26th; at Liberty on the 26th, 31st.

DENSE FOGS.—Dense fogs of one hour, or longer, duration occurred at Blackville on the 21st; at Camden, Columbia, Liberty, Newberry on the 18th; at Georgetown on the 1st; at Pelzer on the 5th, 18th; and at Winnsboro on the 5th.

SLEET.—Sleet was reported at Aiken, Clarks Hill, on the 28th; at Due West, Liberty, Little Mountain, Santuc, Spartanburg, Yorkville on the 31st; at Newberry and Winnsboro on the 28th, 31st; at Saluda on the 7th, 28th, 31st.

THUNDERSTORMS.—Thunderstorms occurred in all parts

of the State on the 11th and 12th; they occurred in the central and western portions on the 26th and 27th, and in the coast regions only on the 31st.

**SNOW.**—Snow fell on four days; the heaviest snowfall was on the 7th. This snowstorm extended over the western and central portions only, with the greatest depth in the extreme northwestern portion decreasing to "trace" in the central portion. On the 26th occasional snow flurries occurred in the western counties, and on the 31st mixed snow, sleet and rain fell in the extreme northwestern portion, the snow melting as it fell.

NOTE.—All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. † Maximum thermometer not standard. ‡ Minimum thermometer not standard. § Exposed not standard.  
\* On other dates also. a indicates 1 day missing, b, 2 days, etc. ° The state of sky at 8 a.m. not used in averages. † For 25 days.

CITATIONS.

[illegible]

\* At these stations thermometers are read in the morning; the maximum temperature then observed appears in the maximum column for the preceding day in which it nearly always occurs.

+ The data for Sundays and Mondays taken on Monday mornings and Monday evenings respectively.

## DAILY PRECIPITATION FOR SOUTH CAROLINA. JANUARY, 1908.

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION,

J. W. BAUER, Section Director.

VOL. XI. COLUMBIA, S. C., FEBRUARY, 1908. No. 2.

## GENERAL SUMMARY.

The average temperature was below the normal, and was lower than on any previous February since 1905. The rainfall was slightly above the normal, and the number of rainy days was about normal.

In a few places in the coast regions the temperature was slightly above the normal, but generally it was below the normal in all districts. The departures from the normal were greatest in the central and western portions. Maximum temperatures were not unusually high or minimum temperatures unusually low. Maximum temperatures from 70° to 80° were recorded in the eastern portion and from 62° to 69° in the western portion. Temperatures of 32°, or below, occurred frequently in the western and central counties and extended to the coast on three days. Temperatures of 20°, or below, were recorded only in the northern half of the State. The 13th, 14th and 29th were the warmest days. The lowest temperatures were generally recorded on the 3d.

The precipitation was above the normal in the eastern and extreme western portions and was normal, or slightly below, in the central portion. The precipitation in the western portion, on the 1st, was mixed snow, sleet and rain, the latter freezing as it fell, and on the night of the 9th and morning of the 10th mixed snow, sleet and rain were again recorded in the western counties; with these exceptions, the precipitation was all in the form of rain. A period of continuous precipitation began on the 9th and ended on the 15th. The rainfall was light during the latter half of the month.

## TEMPERATURE.

The mean temperature was 43.6°, which is 1.5° above the normal. The highest local mean was 48.8° at Beaufort, Blackville, Walterboro, and Yemassee, the lowest was 38.4° at Greenville. The monthly extremes of temperature were 81° at Blackville on the 29th and 12° at Camden on the 3d, making the State range 69°. The greatest local monthly range was 61° at Blackville, the least was 41° at Beaufort. The mean of the daily maximum temperatures was 53.5°, and of the daily minimum temperatures was 33.6°, making the average daily range 19.9°.

## PRECIPITATION.

The average precipitation was 5.28 inches, which is 0.66 of an inch above the normal. The greatest local monthly amount was 9.06 inches at Effingham, the least was 2.98 inches at Bennettsville. The greatest 24-hour rainfall was 2.60 inches at Greenwood on the 1st. The average number of days with rain was 10, ranging from 5 days at Aiken and Allendale to 12 days at Calhoun Falls, Cheraw and Columbia.

EXCESSIVE PRECIPITATION.—At Greenwood on the 1st, 2.60 inches in 24 hours; at Yemassee on the 1st, 2.51 inches in 24 hours.

## WIND.

The prevailing direction of the wind was west at 23 stations, northeast at 9 stations, northwest at 8 stations, east and southwest at 3 stations each, and north and southeast at 1 station each.

HIGH WINDS.—At Beaufort, Charleston, Winthrop College on the 15th; at Bowman on the 1st, 2d, 14th, 15th, 19th; at Camden on the 1st, 15th, 19th; at Cheraw on the 2d, 15th; at Clemson College, Heath Springs, Liberty on the 1st; at Columbia on the 1st, 15th; at Georgetown on the 15th, 16th, 18th, 19th, 22d; at Newberry on the 1st, 19th; at Saluda on the 1st, 15th, 16th; at Spartanburg on the 14th, 15th; at Stateburg on the 1st, 15th, 16th, 17th; at Summerville on the 1st, 2d, 14th, 19th, 20th, 26th, 27th; at Trial on the 1st, 2d, 14th, 15th; at Yorkville on the 14th.

## SUNSHINE AND CLOUDINESS.

The average number of clear days was 14, of partly cloudy days was 6, and of cloudy days was 9.

## MISCELLANEOUS PHENOMENA.

PARHELION.—At Newberry on the 9th.

SOLAR HALOS.—At Camden, Liberty on the 8th.

LUNAR HALOS.—At Charleston on the 12th, 18th; at Winthrop College on the 21st.

SNOW.—At Dillon on the 27th; at Heath Springs, Liberty, Winthrop College, Yorkville on the 10th; at Newberry on the 9th; at Spartanburg on the 9th, 10th.

THUNDERSTORMS.—At Beaufort, Bowman, Kingstree, Summerville on the 1st; at Charleston on the 1st, 15th; at Georgetown, Liberty on the 15th.

SLEET.—At Aiken on the 2d, 10th; at Anderson on the 1st; at Barksdale, Batesburg, Beaufort, Heath Springs, Liberty, Saluda, Yorkville on the 10th; at Camden on the 5th; at Cheraw on the 5th, 10th; at Greenville on the 9th, 10th; at Santuc on the 10th, 11th; at Winthrop College on the 1st, 5th, 10th, 11th, 25th.

DENSE FOG.—At Barksdale on the 6th; at Beaufort on the 12th; at Blackville, Liberty, Newberry on the 13th; at Camden on the 13th, 14th; at Catawba, Clemson College on the 10th; at Columbia, Winthrop College on the 13th, 14th; at Conway, Dillon on the 5th; at Georgetown on the 8th; at Heath Springs on the 12th, 13th, 14th; at Society Hill on the 12th, 13th; at Yorkville on the 6th, 26th.

## REMARKS BY OBSERVERS.

CAMDEN.—The weather was cloudy continuously from the 9th to the 14th, inclusive, except a few minutes of sunshine on the latter day.—J. B. Mickle. CLARKS HILL.—The rain froze to trees on the 14th.—Wm. S. Middleton. DILLON.—The month was unusually cold and windy.—A. E. Rowell. LIBERTY.—The month was wet and cold. Fruit trees did not bud. Forest trees were damaged considerably by the weight of the ice on the 1st and 10th.—Jno. T. Boggs. SANTUC.—The first half of the month was very wet, but the rainfall was light during the latter half. The temperature was sufficiently low to prevent fruit trees from budding.—E. W. Jeter. SPARTANBURG.—Four and a half inches of snow fell during the night of the 9th and to 9 a. m. of the 10th when the precipitation changed to rain and sleet which continued thruout the 10th and 11th, doing much damage to telephone and telegraph wires.—F. P. Robinson. SUMMERVILLE.—The mean relative humidity for the month was 63 per centum.—Miss E. H. Gadsden. TRENTON.—The total precipitation since January 1st is 0.23 of an inch less than the normal for the same period.—C. A. Long.

NOTE. — All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. \* Maximum thermometer not standard. † Minimum thermometer not standard. § Exposed not standard. \* On other dates also. † indicates 1 day missing, b, 2 days, etc. ‡ The state of sky at 8 a.m. not used in averages.

DAILY MAXIMUM AND MINIMUM TEMPERATURES DURING FEBRUARY, 1908.

[illegible]

\* At these stations thermometers are read in the morning; the maximum temperature then observed appears in the maximum column for the preceding day on which it nearly always occurs.

<sup>†</sup>The data for Sundays and Mondays taken on Monday mornings and Monday evenings respectively.

VOL. XI.

COLUMBIA, S. C., MARCH, 1908.

No. 3.

## GENERAL SUMMARY.

The month was unusually mild, with nearly normal, well distributed rainfall. Except last year when the mean temperature of the same month was  $0.6^{\circ}$  higher, it was the warmest March in the last 15 years. The sunshine was slightly above the average amount, and the number of days with rain was approximately normal.

The mean temperature was above the normal in all portions of the State, tho the departures were slightly greater in the central and western portions than in the coast regions. The highest temperatures were recorded in the southeastern portion where maximum temperatures of  $90^{\circ}$  occurred on several days. No freezing temperatures or frosts occurred in the coast regions. The highest temperatures were generally recorded from the 13th to the 18th, the latter having been the warmest day generally thruout the State. The lowest temperatures occurred from the 20th to the 22d, inclusive, and this was the only cool spell with freezing temperatures during the month, tho the mean temperature was slightly below the normal on the 10th and 11th.

The precipitation was unusually well distributed, the amounts at the various stations ranging from 4 inches to 6 inches, except along the immediate coast where the amounts ranged from about 2 inches to 4 inches. There were a few widely separated stations in the interior that received from 2 inches to 4 inches only. The rainfall was comparatively light during the first two decades and the latter portion of the third decade, and was heavy, in places excessive, from the 20th to the 24th inclusive. The precipitation in the western and northern portions on the 20th and 21st was mixed snow, sleet and rain. The snow melted by noon of the 21st. Over the remainder of the State the precipitation was all in the form of rain.

## TEMPERATURE.

The mean temperature was  $61.4^{\circ}$  which is  $6.3^{\circ}$  above the normal. The highest local mean was  $65.6^{\circ}$  at Aiken, the lowest was  $57.2^{\circ}$  at Greenville. The monthly extremes of temperature were  $90^{\circ}$  at Aiken on the 16th, at Blackville on the 13th, at Clarks Hill on the 18th and at Walterboro

on the 16th and 18th, and  $29^{\circ}$  at Dillon on the 21st and Santuc on the 22d, making the State range  $61^{\circ}$ . The greatest local monthly range was  $58^{\circ}$  at Dillon, the least was  $47^{\circ}$  at Batesburg and Beaufort. The mean of the daily maximum temperatures was  $72.6^{\circ}$  and of the daily minimum temperatures was  $50.2^{\circ}$ , making the average daily range  $22.4^{\circ}$ .

## PRECIPITATION.

The average precipitation was 4.56 inches which is 0.43 of an inch above the normal. The greatest local monthly amount was 7.00 inches at Effingham, the least was 1.75 inches at Georgetown. The greatest 24-hour rainfall was 3.20 inches at Summerville on the 24th. The average number of days with rain was 8, ranging from 4 days at Allendale to 12 days at Winthrop College.

EXCESSIVE PRECIPITATION.—At Bowman on the 24th, 2.80 inches in 24 hours; at Smiths Mills on the 25th, 2.75 inches in 24 hours; at Summerville on the 24th, 3.20 inches in 24 hours; at Trial on the 23d-24th, 2.50 inches in 24 hours; at Walterboro on the 24th, 2.51 inches in 24 hours.

## WIND.

The prevailing direction of the wind was southwest at 26 stations, south at 8 stations, west at 7 stations, east and northeast at 2 stations each, and southeast and northwest at 1 station each.

## SUNSHINE AND CLOUDINESS.

The average number of clear days was 15, of partly cloudy days was 8, and of cloudy days was 8.

## MISCELLANEOUS PHENOMENA.

SOLAR HALOS.—At Camden on the 28th.

LUNAR HALOS.—At Winthrop College on the 17th.

LUNAR CORONAE.—At Blackville on the 17th, at Newberry on the 18th, at Winthrop College on the 19th.

LIGHT FROSTS.—At Barksdale on the 21st; at Bowman on the 21st, 22d; Cheraw, Columbia, Trial on the 22d.

KILLING FROSTS.—At Liberty, Little Mountain, Yorkville on the 21st, 22d; at Newberry, Santuc, Spartanburg on the 22d.

THIN ICE.—At Batesburg on the 21st; at Georgetown, Greenwood on the 20th.

SLEET.—At Camden, Spartanburg, Yorkville on the 20th; at Winthrop College on the 21st.

SNOW.—At Cheraw, Winthrop College on the 21st; at Heath Springs, Society Hill, Spartanburg on the 20th.

DENSE FOGS.—At Camden, Cheraw on the 13th; at Columbia, Santuc, Society Hill on the 6th, 13th; at Georgetown on the 12th; at Newberry, Winthrop College on the 6th; at Summerville on the 23d; at Trial on the 14th; at Yorkville on the 5th, 6th, 12th.

THUNDERSTORMS.—Thunderstorms occurred in the eastern portion on the 3d, in the central and northeastern portions on the 16th, 17th and 19th, over the whole State on the 23d, and in the eastern portion on the 24th.

## REMARKS BY OBSERVERS.

BATESBURG.—The month had a large amount of sunshine, and the winds were unusually light for the season. A thunderstorm occurred on the 17th and a slight freeze on the 21st.—E. J. Hite. BOWMAN.—The month was remarkable for its very pleasant weather, generally light winds, and almost general absence of destructive frost.—B. O. Evans. CAMDEN.—Snow and sleet fell on the night of the 20th and disappeared by 9 a. m. of the following morning.—J. B. Mickle. HEATH SPRINGS.—The weather was favorable thruout the month.—J. A. Weaner. LIBERTY.—The ground was well supplied with moisture thruout the month. Peach trees began to bloom on the 8th, apple and quince trees on the 15th, and pear trees on the 20th.—Jno. T. Boggs. SANTUC.—The month was very mild and at times the weather was warm. Only one frost occurred and that did no injury to vegetation which was unusually well advanced. The rainfall was well distributed.—E. W. Jeter. SOCIETY HILL.—The rainfall was excessive and somewhat damaging.—Maj. J. J. Lucas. SUMMERVILLE.—Relative humidity for the month 70 per

centum. An earthquake occurred at 4.06 p. m. of the 3d, and another at 1.50 p. m. of the 7th. The rainfall was excessive on the 24th.—Miss E. H. Gadsden. TRENTON.—The precipitation since January first is 0.88 of an inch in excess of the normal amount for the same period.—C. A. Long.

# MONTHLY MEAN TEMPERATURE AND PREVAILING WINDS FOR APRIL 1888

U. S. DEPARTMENT OF AGRICULTURE,

## CLIMATOLOGICAL SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION,

J. W. BAUER, Section Director.

VOL. XI. COLUMBIA, S. C., APRIL, 1908.

No. 4.

## GENERAL SUMMARY.

The month was characterized by its unusual warmth, and ample, fairly well distributed precipitation, and by the high winds that prevailed during the latter portion of the third decade. It was, excepting 1896, the warmest April in the last 15 years. The precipitation was exceeded in four out of the last 15 years.

The mean temperature was above the normal thruout the State, tho the departures were greatest in the eastern and central portions. Maximum temperatures of 90°, or above, were recorded in the eastern and central portions only. Freezing temperatures were recorded only in the extreme northwestern portion. The highest temperatures occurred generally on the 9th and 10th; the lowest on the 3d and 4th, except in the extreme southeastern portion where the 17th was the coolest day. Light frosts were general on the 4th in the central and western portions, with killing frosts on that date in the mountain districts.

The precipitation was heavy in the eastern half of the State, exceeding six inches over a large area; it was comparatively light, and somewhat below the normal in the northern counties. Excepting a moderately heavy rainfall on the 6th, the precipitation all occurred after the 13th. There were two general rainy periods, the first occurred on the 14th-17th, and the second and longest period, on the 22d-27th; light, scattered showers, accompanying thunderstorms, fell on the 30th.

## TEMPERATURE.

The mean temperature was 66.6° which is 4.9° above the normal. The highest local mean was 68.9° at Kingstree, the lowest was 62.2° at Greenville. The monthly extremes of temperature were 95° at Walterboro on the 10th and 31° at Liberty on the 4th, making the State range 64°. The greatest local monthly range was 58° at Bennettsville, the least was 38° at Winnsboro. The mean of the daily maximum temperatures was 77.6° and of the daily minimum temperatures was 55.6°, making the average daily range 22.0°.

## PRECIPITATION.

The average precipitation was 4.75 inches which is 1.38 inches above the normal. The greatest local monthly amount was 8.48 inches at Bowman, the least was 1.42

inches at Camden (2). The greatest 24-hour rainfall was 3.15 inches at Calhoun Falls on the 16th-17th. The average number of days with rain was 9, ranging from 5 days at Bennettsville, Camden (2), Cheraw (1), Effingham, and Society Hill, to 13 days at Anderson, Barksdale, Clarks Hill, and Columbia.

**EXCESSIVE PRECIPITATION.**—At Calhoun Falls on the 16th-17th, 3.15 inches in 11 hours; at Clemson College on the 15th, 2.51 inches in 24 hours; at Dillon on the 23d, 2.49 inches in 24 hours; at Effingham on the 22d-23d, 2.50 inches in 16 hours; at Ferguson on the 22d-23d, 2.60 inches in 12 hours; at Heath Springs on the 15th, 2.60 inches in 24 hours; at Kingstree on the 22d-23d, 2.70 inches in 16 hours; at Pinopolis on the 16th, 2.90 inches in 24 hours; at Summerville on the 22d-23d, 3.12 inches in 24 hours; at Walterboro on the 22d-23d, 2.89 inches in about 24 hours.

## WIND.

The prevailing direction of the wind was southwest at 19 stations, west at 10 stations, south at 8 stations, north, northeast and southeast at 2 stations each, and northwest at 1 station.

## SUNSHINE AND CLOUDINESS.

The average number of clear days was 11, of partly cloudy days was 10, and of cloudy days was 9.

## MISCELLANEOUS PHENOMENA.

**PARHELION.**—At Santuc on the 7th.

**SOLAR HALOS.**—At Camden on the 9th, 21st; at Santuc on the 14th, 21st.

**LUNAR HALOS.**—At Greenville on the 10th; at Little Mountain on the 9th, 10th; at Santuc on the 10th, 11th; at Winthrop College on the 11th.

**HAIL.**—At Bowman on the 15th; at Pinopolis, Trial on the 26th.

**FROST.**—Killing, at Liberty, Little Mountain on the 4th. Heavy, at Columbia, on the 4th. Light, at Camden, Cheraw, Clarks Hill, Heath Springs, Saluda, Santuc, Trial, Winthrop College, Yorkville, on the 4th; at Newberry on the 4th, 13th, 29th.

**FOG, DENSE.**—At Barksdale on the 6th, 8th; at Blackville on the 6th, 13th; at Bowman, Greenville, Pelzer on the 7th; at Camden on the 6th, 7th, 8th, 14th, 26th; at Charleston on the 14th; at Cheraw on the 7th, 24th; at Columbia on the 7th, 14th; at Liberty on the 7th, 19th; at Newberry on the 6th, 7th, 14th; at Santuc on the 7th, 26th; at Society Hill on the 7th, 8th, 14th; at Trial on the 7th, 8th, 17th; at Winthrop College on the 7th, 22d, 26th; at Yorkville on the 2d, 7th.

**HIGH WINDS.**—At Bowman on the 2d, 3d, 5th, 11th; at Camden on the 5th, 11th, 16th, 25th, 27th, 28th, 30th; at Charleston on the 16th; at Cheraw on the 11th, 28th; at Clarks Hill on the 11th, 30th; at Columbia on the 16th, 26th, 27th, 28th, 30th; at Greenville on the 16th, 26th; at Liberty on the 16th, 30th; at Newberry on the 16th, 27th,

30th; at Trial on the 16th, 26th; at Winthrop College on the 12th, 16th, 17th, 19th, 27th, 28th, 30th; at Yorkville on the 25th, 30th.

**THUNDERSTORMS.**—Thunderstorms occurred on 13 days. There were four periods of maximum frequency, namely, on the 6th, 15th-16th, 25th-27th, and 30th, when from 3 to 14 of the 18 cooperative stations that record thunderstorms reported their occurrence. They were comparatively infrequent on the 5th, 22d, 23d, 24th, 28th, and 29th. None occurred on the 1st-4th, 7th-14th, 17th-21st.

VOL. XI.

COLUMBIA, S. C., MAY, 1908.

No. 5.

## GENERAL SUMMARY.

The first decade was cooler, the remainder of the month warmer than usual. There were no marked temperature extremes. The precipitation tho generally ample, was not well distributed. The sunshine was abundant. The mean temperature was nearly the same as in 1901, and the average precipitation was practically the same as in 1906.

The mean temperature was about  $7^{\circ}$  higher in the extreme southern than in the northwestern portion, tho the decrease in temperature was not regular from the coast to the mountains, being small over the eastern half of the State. High maximum temperatures prevailed over the whole State on the 15th, and from the 21st to the 31st. Temperatures as low as  $36^{\circ}$  occurred on the 1st in the western counties. Light frosts were common on that date in all except the immediate coast sections.

Slight deficiencies in precipitation occurred over moderately large areas in the Savannah valley, and smaller ones in the northeastern and central counties, tho the amounts were generally over an inch. A large area in the eastern division, extending to the southern coast, received heavy rains, ranging from four to seven inches. Except a general and moderately heavy rainfall on the 6th-7th, the precipitation all occurred after the 15th, with frequent thunderstorms during the third decade. The most general rain fell on the 19th, and the heaviest local amounts on the 29th and 30th.

## TEMPERATURE.

The mean temperature was  $71.8^{\circ}$  which is  $0.9^{\circ}$  above the normal. The highest local mean was  $75.8^{\circ}$  at Beaufort, the lowest was  $68.4^{\circ}$  at Greenville. The monthly extremes of temperature were  $96^{\circ}$  at Blackville on the 21st, Clarks Hill, Florence on the 22d, Anderson, Spartanburg on the 28th, Greenwood, Newberry, Trenton on the 29th, and  $36^{\circ}$  at Barksdale, Clarks Hill, Greenville, Newberry on the 1st, making the State range  $60^{\circ}$ . The greatest local monthly range was  $60^{\circ}$  at Clarks Hill and Newberry, the least was  $40^{\circ}$  at Beaufort. The mean of the daily maximum temperatures was  $83.9^{\circ}$ , and of the daily minimum temperatures was  $59.8^{\circ}$ , making the average daily range  $24.1^{\circ}$ .

## PRECIPITATION.

The average precipitation was 2.92 inches which is 0.37 of an inch below the normal. The greatest local monthly amount was 7.06 inches at Beaufort, the least was 0.70 of an inch at Greenwood. The greatest 24-hour rainfall was 2.45 inches at Beaufort on the 30th. The average number of days with rain was 7, ranging from 3 days at Chappels, Clemson College, and Greenwood to 11 days at Beaufort, Ferguson, and St. George.

EXCESSIVE PRECIPITATION.—At Blairs on the 19th, 2.00 inches in 30 minutes; at Kingstree on the 30th, 1.43 inches in one hour.

## WIND.

The prevailing direction of the wind was southwest at 23 stations, west at 11 stations, south at 5 stations, northwest at 3 stations, and north and northeast at 1 station each.

## SUNSHINE AND CLOUDINESS.

The average number of clear days was 16, of partly cloudy days was 11, and of cloudy days was 4.

## MISCELLANEOUS PHENOMENA.

SOLAR HALOS.—At Camden on the 12th, 14th.

FOGS, DENSE.—At Camden on the 17th, 18th, 30th; at Liberty on the 7th, 20th; at Trial on the 14th.

LIGHT FROST.—At Anderson, Barksdale, Batesburg, Blairs, Camden, Catawba, Cheraw, Clarks Hill, Columbia, Effingham, Heath Springs, Liberty, Newberry, Saluda, Summerville, Winthrop College on the 1st.

LUNAR HALOS.—At Beaufort on the 11th, 12th, 13th, 14th; at Blackville on the 3d; at Camden on the 14th; at Columbia on the 11th, 14th; at Liberty on the 11th, 12th, 27th, 28th, 29th; at Winthrop College on the 13th, 14th, 15th, 16th.

HAIL.—At Beaufort on the 5th, 29th, 30th; at Bowman, Trial on the 22d; at Charleston, Georgetown on the 21st; at Ferguson on the 23d; at Liberty on the 23d, 29th; at Pinopolis on the 5th, 16th; at Society Hill on the 20th, 22d.

THUNDERSTORMS.—Thunderstorms occurred on 17 days. There were four periods of maximum frequency, namely, on the 5th-7th, 16th-19th, 21st-25th, and 29th-30th, when from 3 to 11 of the 18 stations that record thunderstorms reported their occurrence. They were comparatively infrequent on the 20th and the 31st. None occurred on the 1st-4th, 8th-15th, 26th, and 28th.

HIGH WINDS.—At Beaufort on the 5th; at Bowman on the 8th, 9th, 10th, 31st; at Camden on the 7th, 8th; at Charleston on the 19th; at Cheraw on the 8th, 10th; at Columbia on the 2d, 18th, 23d; at Effingham on the 21st; at Georgetown on the 24th; at Heath Springs on the 8th, 9th, 10th; at Liberty on the 2d, 3d, 20th; at Newberry on the 2d, 7th, 10th; at Santuc on the 23d; at Trial on the 22d; at Winthrop College on the 2d, 3d, 7th.

## ERRATA.

The following corrections should be made in April, 1908, number of the Monthly Reports, namely: On page 29, at Clemson College, the lowest and date 33° on the 4th, should be 32° on the 4th; in the monthly mean temperatures, at Aiken 67.6°, should be 67.7°; at Camden, 67.0°, should be 67.2°; at Dillon 67.2°, should be 67.1°. On page 30, at Aiken, the maximum on the 12th 78°, should be 80°; and mean maximum 79.2°, should be 79.3°; at Camden, maximum on the 12th, 76°, should be 86°, and mean maximum 78.1°, should be 78.4°; at Dillon, minimum on the 5th 58°, should be 50°, and on the 6th 61°, should be 59°, and the mean minimum 54.7°, should be 54.4°.

NOTE. — All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation.      † Maximum thermometer not standard.      ‡ Minimum thermometer not standard.      § Exposed not standard.  
\* On other dates also.      a indicates 1 day missing, b, 2 days, etc.      ° The state of sky at 8 a.m. not used in averages.

## CLIMATOLOGICAL REPORT: SOUTH CAROLINA SECTION.

MAY, 1908.

DAILY MAXIMUM AND MINIMUM TEMPERATURES DURING MAY, 1908.

[illegible]

\* At these stations thermometers are read in the morning; the maximum temperature then observed appears in the maximum column for the preceding day on which it nearly always occurs.

+ The data for Sundays and Mondays taken on Monday mornings and Monday evenings respectively.

## TOTAL PRECIPITATION FOR MAY, 1942

## DAILY PRECIPITATION FOR SOUTH CAROLINA. MAY, 1908.

SOUTH CAROLINA SECTION,

J. W. BAUER, Section Director.

Vol. XI.

COLUMBIA, S. C., JUNE, 1908.

No. 6.

### GENERAL SUMMARY.

The temperature was generally favorable thruout the month. Except a few days early in the month, and at the end of the second decade, the daily mean temperature was continuously below the normal, tho the departures were small as a rule. The precipitation was generally ample, tho only fairly well distributed. The average sunshine was slightly deficient. The monthly mean temperature was lower in 1900, 1903, and 1907, and was higher in every other June since 1894. The average precipitation was nearly the same as in 1896 and 1897, being approximately normal.

The monthly mean temperature varied but little in the central and eastern portions, where the differences were generally less than 3°, while the difference between the extreme southern and extreme northwestern portions was slightly over 5°, being somewhat less than the usual range. High maximum temperatures occurred at the beginning of the second and third decades, respectively, when they were in the nineties over the entire State. The 8th, 16th, and 28th-29th were the coolest periods, the lowest temperatures being generally recorded on the earliest date.

The precipitation was above the normal—with amounts ranging from six to nine inches—in the eastern portion, except along the immediate coast, where marked deficiencies occurred. There were also small areas in the Savannah valley, and in the north central and northeastern counties, where the rainfall was below the normal. Over the remainder of the State the amounts ranged from four to six inches. There were three rainy periods, namely, the 4th-6th, 10th-12th, and 21st-26th. Practically no rain fell on the 1st-2d, 8th-9th, 27th-29th, and only widely scattered showers on other days. Excessive precipitation was recorded locally in the eastern portion on the 5th and 25th.

Hail and high winds, accompanying thunderstorms, occurred on a number of days, but without doing any material injury.

### TEMPERATURE.

The mean temperature was 76.6°, which is 1.1° below the normal. The highest local mean was 79.1°, at Beaufort; the lowest was 73.4°, at Greenville. The monthly extremes were 100°, at Florence and Heath Springs, on the 20th, and 48°, at Liberty, on the 8th, making the State range 52°. The greatest local monthly range was 46°, at Liberty; the least was 23°, at Charleston. The mean of the daily maximum temperatures

was 86.9°, and of the daily minimum temperatures was 66.4°, making the average daily range 20.5°.

### PRECIPITATION.

The average precipitation was 4.90 inches, which is 0.34 of an inch below the normal. The greatest local monthly amount was 9.10 inches, at Walterboro; the least was 1.08 inches, at Smiths Mills. The greatest 24-hour rainfall was 3.82 inches, at Saint Matthews, on the 23d. The average number of days with rain was nine, ranging from four days at Allendale to fifteen days at Pelzer.

**EXCESSIVE PRECIPITATION:** At Bowman, on the 25th, 2.68 inches in 8 hours; at Camden, on the 20th, 1.59 inches in 1 hour; at Effingham, on the 25th, 2.50 inches in 24 hours; at Ferguson, on the 5th, 2.65 inches in 24 hours; at Jacksonboro, on the 12th, 1.69 inches in 1 hour, and on the 21st 1.07 inches in 1 hour; at Kingstree (1), on the 5th, 3.50 inches in 12 hours; at Kingstree (2), on the 5th, 3.00 inches in 4 hours; at Newberry, on the 25th, 1.80 inches in 40 minutes; at St. George, on the 5th, 2.60 inches in 5 hours; at St. Matthews, on the 23d, 3.82 inches in 4 hours and 30 minutes; at Walterboro, on the 5th, 2.61 inches in 24 hours; at Yemassee, on the 10th, 2.56 inches in 4 hours and 15 minutes.

### WIND.

The prevailing direction of the wind was northeast at 19 stations, south at 8 stations, west at 6 stations, east southeast and southwest at 4 stations each, and north at 1 station.

### SUNSHINE AND CLOUDINESS.

The average number of clear days was 13, of partly cloudy days was 13, and of cloudy days 4.

### MISCELLANEOUS PHENOMENA.

**LUNAR HALO.**—At Charleston on the 12th.

**PARHELIA.**—At Liberty on the 6th, 8th.

**HAIL.**—At Camden on the 20th; at Newberry on the 25th; at Saluda on the 17th, 22d; at Society Hill on the 26th; at Walterboro on the 2d.

**DENSE FOGS.**—At Blackville and Bowman on the 18th; at Camden on the 11th; at Liberty on the 15th, 25th; at Newberry on the 18th, 19th; at Trial on the 13th, 18th, 19th; at Jacksonboro and Walterboro on the 3d.

**HIGH WINDS.**—At Beaufort on the 10th, 12th, 24th, 25th; at Blackville and Columbia on the 10th; at Camden on the 10th, 15th, 20th, 21st; at Charleston on the 22d; at Greenville on the 10th, 21st; at Smith Mills on the 23d; at Trial on the 10th, 20th, 21st.

**THUNDERSTORMS.**—Thunderstorms occurred on 22 days. There were five periods of maximum frequency, namely, on the 2d-5th, 10th-12th, 14th, 17th, and 20th-25th, when from 3 to 15 of the 20 stations that record thunderstorms reported their occurrence. They were comparatively infrequent on the 6th, 9th, 13th, 16th, 18th, and 26th. None occurred on the 1st, 7th, 8th, 19th, and 27th-30th.

\* On other dates also.

## Remarks by Observers.

*Beaufort*: The percentage of cloudiness was unusually high. No very high temperatures occurred. The last few days were remarkably cool. Thunderstorms occurred on nineteen days.—Miss E. G. RICE.

*Bowman*: The month was without marked temperature extremes and the precipitation was about normal. The thunderstorm on the 25th was unusually severe.—B. O. EVANS

*Liberty*: The month was wet, with favorable temperatures.—Jno. T. BOGGS.

*Santee*: There were numerous thunderstorms, but none were severe. The precipitation was poorly distributed, some portions of the county receiving an insufficient amount.—E. W. JETER.

*Summerville*: The relative humidity for the month averaged 83 per cent.—Miss E. H. GADSDEN.

NOTE.—All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. † Maximum thermometer not standard. ‡ Minimum thermometer not standard. § Exposed not standard. \* On other dates also. a, indicates 1 day missing; b, 2 days, etc. ° The state of sky at 8 a. m. not used in averages.

DAILY MAXIMUM AND MINIMUM TEMPERATURES DURING JUNE, 1908.

[illegible]

\* At these stations thermometers are read in the morning; the maximum temperatures then observed appear in the maximum column for the preceding day on which it nearly always occurs.

TOTAL PRECIPITATION FOR JUNE, 1908.

## DAILY PRECIPITATION FOR SOUTH CAROLINA, JUNE, 1908.

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION,

J. W. BAUER, Section Director.

Vol. XI.

COLUMBIA, S. C., JULY, 1908.

No. 7.

## GENERAL SUMMARY.

Except a few days in the second decade, the daily mean temperature was slightly below the normal each day, the precipitation was generally ample and well distributed, tho deficient over a large area in the south-central portion, and the sunshine was approximately normal. Compared with previous years the month was slightly cooler than the average July, tho the mean temperature was lower in 1894, 1904, and 1906. The average precipitation was more than in eight years since 1894. The wettest years were 1894, 1896 and 1906, when the average precipitation was over eight inches. The driest years were 1902 and 1903, when the average was less than four inches.

The monthly mean temperature was about 4° higher on the coast than in the mountain districts, and was quite uniform over the State generally. The greatest departures above the normal occurred on the 12th-16th, and 18th-22d, inclusive, tho the highest maximum occurred on the 31st. Comparatively low temperatures prevailed from the 9th to the 12th, inclusive, and on the 29th and 30th. The extremes for the month were well within previous records.

Moderate to comparatively large deficiencies in precipitation occurred over a large area in the central counties, where the monthly amounts were generally less than four inches and in places less than two inches. It was also deficient on the immediate coast, in the vicinity of Charleston, where less than three inches fell. Over the northeastern counties, particularly in that portion bordering North Carolina, the rainfall was heavy, exceeding ten inches over a considerable area. The ten most westerly counties received about a normal, well distributed rainfall.

## TEMPERATURE.

The mean temperature was 79.8°, which is 0.3° below the normal. The highest local mean was 81.4°, at Charleston; the lowest was 76.9°, at Greenville. The monthly extremes of temperature were 100°, at Blackville, on the 31st, and 60°, at Liberty and Spartanburg, on the 10th, making the State range 40°. The greatest local monthly range was 38°, at Santuc and Spartanburg; the least was 25°, at St. Matthews. The mean of the daily maximum temperatures was 89.2°, and of the daily minimum temperatures; 70.3°, making the average daily range 18.9°.

## PRECIPITATION.

The average precipitation was 5.43 inches, which is 0.42 of an inch below the normal. The greatest local monthly amount was 11.15 inches, at Conway; the least was 1.83 inches, at Aiken. The greatest 24-hour rainfall was 4.82 inches, at Conway, on the 8th-9th. The average number of days with rain was 12, ranging from 4 days at Aiken to 18 days at Walterboro.

EXCESSIVE PRECIPITATION. At Batesburg, on the 14th, 1.06 inches in 35 minutes; at Camden (1), on the 2d-3d, 3.36 inches in 24 hours; at Chappells, on the 8th-9th, 4.74 inches in 4 hours and 30 minutes; at Clemson College, on the 4th, 2.90 inches in 24 hours; at Conway, on the 8th-9th, 4.82 inches in 18 hours; at Effingham, on the 8th-9th, 3.34 inches in 20 hours; at Georgetown, on the 8th, 3.30 inches in 24 hours; at Liberty, on the 4th, 3.50 inches in 24 hours; at Newberry, on the 4th, 3.60 inches in 24 hours; at Spartanburg, on the 4th-5th, 2.57 inches in 4 hours and 40 minutes.

## WIND.

The prevailing direction of the wind was south at 14 stations, southwest at 9 stations, east and southeast at 6 stations each, west at 4 stations, northeast at 3 stations, and north at 2 stations.

## SUNSHINE AND CLOUDINESS.

The average number of clear days was 12, of partly cloudy days 13, and of cloudy days 6.

## MISCELLANEOUS PHENOMENA.

RAINBOW.—At Beaufort on the 15th.

PARHELIA.—At Liberty on the 9th, 24th.

SOLAR HALOS.—At Liberty on the 4th, 25th.

HAIL.—At Little Mountain on the 8th; at Spartanburg on the 22d.

LUNAR HALOS.—At Charleston on the 7th, 10th, 12th; at Liberty on the 6th.

DENSE FOGS.—At Bowman and Society Hill on the 21st; at Liberty on the 7th; at Trial on the 21st, 22d.

RELATIVE HUMIDITY.—The percentage of relative humidity for the month at Summerville was 82.

HIGH WINDS.—At Bowman and Georgetown on the 29th, 30th; at Cheraw, Jacksonboro, and Society Hill on the 30th; at Charleston on the 26th; at Columbia on the 13th; at Liberty on the 24th; at Smiths Mills on the 31st; at Summerville on the 26th, 30th; at Trial on the 3d, 26th, 30th.

THUNDERSTORMS.—Thunderstorms occurred on thirty days. The periods of maximum frequency were on the 1st-5th, 8th-9th, 12th-15th, 18th, 20th-29th, when from three to ten of the nineteen stations that recorded thunderstorms reported their occurrence. They were comparatively infrequent on the 6th-7th, 10th-11th, 16th-17th, 19th, and 31st. None occurred on the 30th.

## Errata.

The following corrections should be made in the June, 1908, Monthly Report, namely, on page 45, at Santuc, the lowest temperature, 58, should be 57; at St. George, the greatest 24-hour precipitation, 2.60, should be 2.87.

## Remarks by Observers.

*Beaufort:* The third week was very warm and sultry, the mean maximum for the week being 90. Miss L. G. Rice.

*Burman:* There were no excessive or heavy rains during the month, tho the soil was kept well supplied with moisture by frequent light showers. B. O. Evans.

*Chicks Hill:* There was an excess of rain during the first half of the month, but, unfortunately, the record was lost. W. S. Middleton.

*Liberty:* Clear, hot weather from the 16th to the 25th, inclusive, was damaging. Jno. T. Boes.

*Santee:* A beneficial rain fell during the first and third decades; the second decade was dry and hot, and the light showers that fell extended over very limited areas. E. W. Jure.

*Trenton:* The precipitation was very deficient for the month, and the total rainfall since January is 4.61 in less than the normal for this season. C. A. Lutz.

OF THE  
**WEATHER BUREAU.**

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director.

Vol. XI. COLUMBIA, S. C., AUGUST, 1908. No. 8.

**GENERAL SUMMARY.**

The temperature was not especially noteworthy, except during the latter portion of the month, when it was unusually low. The precipitation was generally light, with droughty conditions in the central portions during the first and second decades, and was abnormally heavy during the first half of the third decade over the eastern and northern portions.

Except in the mountain districts, the monthly mean temperature was nearly uniform thruout the State. The first four days were, generally, the warmest part of the month, tho with nearly as high temperatures from the 14th to the 18th, inclusive.

The precipitation was not well distributed. It was slightly above the normal over the southern half of the State, except in the lower coast regions and in the lower Savannah valley, where slight deficiencies occurred. Excessive amounts were received in a few of the extreme easterly counties and in all of the northern and western counties, where in places from two to four times the normal amounts of rainfall were recorded, most of which fell from the 23d to the 26th, causing floods in all of the streams and rivers of the upper and central portions. The flood waters rose to greater heights and the floods were more destructive, and the money value of the damage was greater than ever before known, authentic records being available for comparison since 1840.

**TEMPERATURE.**

The mean temperature was 78.6°, which is 0.5° below the normal. The highest local mean was 81.2°, at Allendale; the lowest was 75.6°, at Greenville. The monthly temperature extremes were 100° at Aiken on the 1st and 3d, at Anderson on the 4th, at Blackville on the 2d and 17th, at Newberry on the 15th, at Saluda on the 3d, 4th, and 15th, and 49° at Trenton on the 29th, making the State range 51°. The greatest local monthly range was 49° at Trenton; the least was 28° at St. George. The mean of the daily maximum temperatures was 88.0°, and of the daily minimum temperatures was 69.2°, making the average daily range 18.8°.

**PRECIPITATION.**

The average precipitation was 9.11 inches, which is 4.91 inches above the normal. The greatest local monthly amount was 19.52 inches, at Greenville; the least was 3.16 inches, at Yemassee. The greatest twenty-four hour fall was 11.65 inches,

at Anderson, on the 24th-25th. The average number of days with rain was 19, ranging from 6 days at Blairs and Jacksonboro to 15 days at Ellingham and Winthrop College.

**EXCESSIVE PRECIPITATION.** At Anderson on the 24th-26th, 11.31 inches in 34 hours; at Blairs on the 24th-26th, 8.64 inches in 60 hours; at Calhoun Falls on the 23d-26th, 9.62 inches in 63 hours; at Camden (1) on the 25th-26th, 9.05 inches in 23 hours; at Catawba on the 23d-26th, 10.12 inches in 65 hours; at Cheraw on the 24th-26th, 6.54 inches in 62 hours; at Clemson College on the 25th, 2.81 inches in 24 hours; at Columbia on the 19th, 3.15 inches in 9 hours; at Conway on the 26th, 2.83 inches in 14 hours; at Dillon on the 19th, 3.69 inches in 24 hours; at Greenville on the 23d-26th, 16.94 inches in 78 hours; at Greenwood on the 24th-26th, 7.06 inches in 60 hours; at Jacksonboro on the 20th, 4.00 inches in 24 hours; at Kingstree on the 27th, 2.60 inches in about 14 hours; at Liberty on the 24th-25th, 11.12 inches in 24 hours; at Little Mountain on the 19th, 3.21 inches in 24 hours; at Mt. Holly, N. C., on the 23d-26th, 11.19 inches in 58 hours; at Pelzer on the 24th-26th, 5.14 inches in 27 hours; at St. George on the 20th, 2.60 inches in 4 hours; at Saluda on the 6th, 2.60 inches in 24 hours; at Santuc on the 23d-25th, 10.83 inches in 58 hours; at Spartanburg on the 24th-26th, 9.33 inches in 72 hours; at Ferguson on the 26th, 2.59 inches in 24 hours; at Walterboro on the 19th, 2.51 inches in 16 hours; at Winnsboro on the 24th-25th, 7.85 inches in 48 hours; at Winthrop College on the 24th-25th, 7.10 inches in 48 hours.

**WIND.**

The prevailing direction of the wind was south at 13 stations, southwest at 10 stations, southeast at 5 stations, northeast and east at 4 stations each, west at 3 stations, and northwest at 1 station.

**SUNSHINE AND CLOUDINESS.**

The average number of clear days was 12, of partly cloudy days 11, and of cloudy days 8.

**MISCELLANEOUS PHENOMENA.**

**SOLAR HALOS.**—At Blackville on the 6th; at Liberty on the 3d.

**HAIL.**—At Batesburg on the 21st; at Bowman and Summer-ville on the 2d.

**DENSE FOGS.**—At Beaufort on the 27th; at Blackville on the 10th; at Columbia on the 11th; at Liberty on the 20th; at Santuc on the 17th, 20th, 22d; at Trial on the 3d, 4th.

**THUNDERSTORMS.**—Thunderstorms occurred on 21 days. The periods of maximum frequency were the 2d, 5th-6th, 8th, 16th, 19th-21st, 23d-26th, when from five to eleven of the fifteen stations that recorded thunderstorms reported their occurrence. From one to three thunderstorms were reported on the 3d-4th, 7th, 9th-11th, 17th, and 22d.

**Errata.**

The following corrections should be made in the July, 1908, number of the Monthly Reports: On page 53, at Batesburg, the greatest 24-hour precipitation, 1.06, should be 1.14; at Cheraw, 0.97 should be 1.27, and at St. George 0.64 should be 0.70. At Liberty the highest temperature and date, 90 on the 21, should be 87 on the 18th.

\*On other dates also.

## Remarks by Observers.

BEAUFORT: The first half of the month was warm and dry; the latter part was cool with frequent rains.—Miss E. G. RICE.

BOWMAN: There were fewer thunderstorms than usual. Very heavy rains occurred from the 21st to the 26th, inclusive, damaging roads severely.—B. O. EVANS.

CAMDEN: The highest flood waters ever known occurred in this vicinity on the 26th.—J. B. MICKLE.

CLARKS HILL: The Savannah river near this place attained a height of from 8 feet to 10 feet higher than in 1888. The flood on the 26th was caused by "up-country" rains. The local streams were affected very little by the rainfall in Edgefield county. WM. S. MIDDLETON.

DILLOX: The month was unusually warm and wet. A. E. ROWELL.

LIBERTY: The numerous showers occurred; the month was very dry and hot until the 22d, when general heavy rains caused floods on the 24th and 25th.—JNO. T. BOGGS.

NEWBERRY: Bush river was not as high as it was in September, 1888, and Little river, above the point, where it was affected by backwater from the Saluda river, lacked 6 feet of being as high as in 1888, but near the Saluda river it was 7 feet higher than in 1888.—W. G. PETERSON.

SANTUC: The first two decades were very hot, with moderate rainfall. The rainfall was excessive from the 21st to the 26th, 13.27 inches having fallen in this period, being the heaviest precipitation since records have been kept.—E. W. JETER.

SOCIETY HILL: Continuous rains from the 18th to the 26th caused a destructive flood in the Great Pee Dee river, the flood waters being higher than ever before recorded, causing great loss of crops and live stock.—Maj. J. J. LUCAS.

SPARTANBURG: Heavy rainfall from the 24th to the 26th, inclusive, caused floods in all streams in this vicinity, damaging bridges and lands to the value of many thousands of dollars, and flooded power houses and some large cotton mills.—F. P. ROBINSON.

TRENTON: The precipitation since January 1st is 5.97 inches less than the normal for the same period.—C. A. LONG.

Vol. XI. COLUMBIA, S. C., SEPTEMBER, 1908.

No. 9

## GENERAL SUMMARY.

The month was characterized by an unusually low mean temperature, generally deficient rainfall, and low percentage of cloudiness. The mean temperature was the second lowest of record, September, 1902, having been slightly cooler. The warmest Septembers were those of 1900 and 1906, when the mean temperature was 77.1°. September, 1897, 1899, and 1903 were only slightly warmer than the present month. During the last 15-year period the least monthly precipitation was 1.29 inches in 1895. In that year a large portion of the State received no rainfall. The rainfall is usually unevenly distributed in September. The exceptions occurred in 1894 and 1907, when the entire State received nearly normal amounts and a few stations received from two to three times their normal amounts.

The mean temperature was below the normal, except at one station, the departures ranging from 0.7° to 4.8°. The greatest departures occurred generally in the western portion the State. Maximum temperatures of 90° or above were recorded at a majority of the stations, principally on the 2d, 5th, 7th, 8th, 12th, 13th, and 14th. The monthly minimum temperatures were below 50° in the central and western portions, and generally above 50° in the eastern portion. Light frosts were recorded in the extreme northwestern portion on the 28th, 29th, and 30th.

The heaviest rainfall, amounting to over six inches, was recorded in Kershaw, Lee, Darlington, and Florence counties, and in the extreme southern point of Beaufort county. The central and eastern portions received an average of slightly over three inches, except a considerable area in the northern part of the coast region, where the precipitation was below two inches, and in portions of Orangeburg and Berkeley counties where it was less than one inch. The western division received less than two inches, except Pickens, Greenville, and a part of Anderson counties, where the average rainfall was about three inches. There were two periods with general rains, the first began on the 4th and ended on the 8th, and the second included the 26th-28th. During the intervening time practically no rain fell except a few very light and widely scattered showers, with amounts generally too small to measure.

The sunshine was above the normal, more especially from the 9th to the 21st, inclusive. The wind movement was below the normal, except along the immediate coast. The prevailing winds were northeast, that being the prevailing direction for the last 15 years, except in 1907, when it was south.

## TEMPERATURE.

The mean temperature was 72.1°, which is 1.1° below the normal. The highest recorded mean was 76.1° at Beaufort; the lowest was 69.0° at Clemson College. The monthly temperature extremes were 91° at Walterboro on the 9th and 11th, and 49° at Liberty on the 29th, making the State range 42°. The greatest local monthly range was 53° at Anderson; the local range was 35° at Charleston. The sum of the daily maximum temperatures was 82.6°, and of the daily minimum temperatures was 74.2°, making the average daily range 29.4°.

## PRECIPITATION.

The average precipitation was 2.79 inches, which is 1.14 inches below the normal. The greatest local monthly amount was 6.98 inches, at Camden (2); the least was 0.12 inch, at Ferguson. The greatest 24-hour rainfall was 4.60 inches, at Camden (2) on the 28th. The average number of days with rain was 4, ranging from 2 days at Beaufort and Ferguson to 6 days at 10 stations.

**EXCESSIVE PRECIPITATION.**—At Calhoun Falls on the 5th, 2.84 inches in 22 hours; at Camden (1) on the 27th-28th, 3.78 inches in 24 hours; at Camden (2) on the 28th, 4.60 inches in 24 hours; at Florence on the 6th, 4.25 inches in about 14 hours.

## WIND.

The prevailing direction of the wind was northeast at 24 stations, east at 11 stations, north at 5 stations, and southeast, south, and southwest at 1 station, each.

## SUNSHINE AND CLOUDINESS.

The average number of clear days was 15, of partly cloudy days 9, and of cloudy days 6.

## MISCELLANEOUS PHENOMENA.

**HAIL.**—At Liberty on the 7th.

**HIGH WINDS.**—At Beaufort on the 25th, 26th; at Camden on the 7th.

**SOLAR HALOS.**—At Camden on the 30th; at Santuc on the 18th, 19th; at Trenton on the 24th.

**LIGHT FROSTS.**—The first light frosts of the season occurred at Anderson and Liberty on the 29th; at Newberry on the 29th, 30th; at Pelzer on the 28th.

**AUROSAS.**—A brilliant aurora was observed from about 8.20 p. m. to 9.40 p. m. at Camden on the 11th, 29th; at Columbia, Little Mountain, Newberry, Saluda, Trenton, and Winthrop College on the 11th.

**DENSE FOGS.**—Dense fogs occurred at Beaufort, Blackville, Camden, Charleston, on the 21st; at Columbia on the 7th; at Jacksonboro on the 21st, 22d, 23d, 24th; at Liberty and Society Hill, on the 6th; at St. George on the 24th; at Trial on the 20th.

**THUNDERSTORMS.**—Thunderstorms occurred on 12 days. The periods of maximum frequency were the 2d, 4th-8th, 27th-28th, when from 3 to 9 of the 15 stations that recorded thunderstorms reported their occurrence. One or two stations recorded thunderstorms on the 3d, 9th, 22d, and 23d.

## Errata.

The following changes should be made on the August, 1908, Monthly Report, namely: on page 61, at Little Mountain, total precipitation 12.1 should be 11.31; at St. George, greatest 24-hour precipitation 2.00 should be 3.35; at St. Matthews, greatest 24-hour precipitation 1.70 should be 1.36; at Summerville, greatest 24-hour precipitation 1.91 should be 1.95; at Winnsboro, mean temperature 77.4 should be 77.6. On page 64, at Little Mountain, precipitation on the 3d, 1.02, should be 0.02, and the total precipitation, 12.31, should be 11.31.

## Remarks by Observers.

BEAUFORT: The month was generally cool, with more than the usual amount of cloudiness. Thunderstorms were of frequent occurrence early in the month.—Miss E. G. RICE.

BOWMAN: The rainfall was unusually light, streams and ponds have begun to dry up, and water is low in wells, some wells having been deepened to maintain water.—B. O. EVANS.

LIBERTY: The precipitation was light after the 7th, there having been a period of nineteen days without rain. The winds were generally easterly after the first week. The last few days were cool, with light frosts in places.—Jno. T. Boggs.

SANTUC: The month was very dry, rain having fallen on only three days. The percentage of cloudiness was unusually low. The latter half of the month was very hazy and smoky. The temperature averaged unusually low.—E. W. JETER.

SOCIETY HILL: The weather as a whole was very favorable thruout the month.—Maj. J. J. LUCAS.

SUMMERVILLE: The relative humidity for the month was 84. The month was unusually cool and dry.—Miss E. H. GADSDEN.

TRENTON: The total precipitation since January 1st is 7.41 inches less than the normal amount for the same period.—C. A. LONG.

NOTE.—All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. ‡ Maximum thermometer not standard. † Minimum thermometer not standard. § Exposed not standard. \* On other dates also. a. Indicates 1 day missing; b. 2 days, etc. ° The state of sky at 8 a. m. not used in averages.

DAILY MAXIMUM AND MINIMUM TEMPERATURES DURING SEPTEMBER, 1908.

At these stations thermometers are read in the morning; the maximum temperatures then observed appear in the bulletin for the preceding day on which it nearly always occurs. The data for Sundays and Week-ends taken on Monday mornings and Monday evenings respectively.

TOTAL PRECIPITATION FOR SEPTEMBER, 1905

Vol. XI.

COLUMBIA, S. C., OCTOBER, 1908.

No. 10.

## GENERAL SUMMARY.

Except at a few stations in the eastern division, the mean temperature was uniformly below the normal; the precipitation and sunshine were generally in excess of the normal. As a whole the month was cool, with ample rainfall and a small percentage of cloudiness. The mean temperature was the same as in October, 1903, and was slightly higher than in October, 1895, 1896, 1906, or 1907; it was lower than in the other Octobers for last 15-year period. The warmest October was in 1900, when the mean was 67.6°; the coolest was in 1907, when the mean was 61.2°. Higher temperatures were recorded in every October since 1894, than this year, and during the same period lower minimum temperatures occurred in every year except 1897. The average precipitation was exceeded in amount only in October, 1894, 1899, and 1902. The heaviest rainfall for any October was recorded in 1899, and the least in October, 1907, when the average precipitation was only 0.73 of an inch.

The mean temperature was between 66° and 62° in the eastern division, and between 62° and 58° in the western division. The lower portion of Beaufort County having been, as usual, the warmest, and Greenville County the coolest regions. The first five days were unusually cool, with light frosts in the western division. The low temperatures continued until the 17th, and a decided cool wave, causing frosts to within a few miles of the coast, occurred on the last three days. The highest temperatures were recorded generally on the 18th and 19th. The period from the 23d to the 26th gave the greatest departures above the normal. The 14th, 15th and 30th were the coolest days.

The precipitation was the heaviest in the northeastern portion, especially in Horry and Marion counties, where monthly amounts of from 6 to 8 inches were received. The extreme northwestern portion also received over 6 inches. The rainfall was deficient in the coast counties south of Georgetown County, where the monthly amounts were generally less than 2 inches. There were three rainy periods well distributed thruout the month. The shortest occurred on the 8th-9th with moderate precipitation, the second from the 22d to the 24th, inclusive, with heavy precipitation in places, and the third from the 27th to the 29th, inclusive, with generally heavy precipitation that caused flood stages in the Catawba-Wateree River. During the intervening time clear weather prevailed over the entire State.

Toward evening of the 19th the sky became smoky on the northern and northeastern horizon, and on the 20th the sun was nearly obscured thruout the day by dense smoke and by dense fog along the coast. Scarcely a trace of smoke was visible on the 21st.

## TEMPERATURE.

The mean temperature was 62.0°, which is 1.4° below the normal. The highest local mean was 66.8°, at Beaufort; the lowest was 58.2, at Greenville. The monthly temperature extremes were 80°, at Dillon and Walterboro on the 19th, and 35° at Bowman on the 30th, making the State range 54°. The greatest local monthly range was 50°, at Spartanburg; the least was 35°, at Charleston. The mean of the daily maximum temperatures was 73.1°, and of the daily minimum temperatures was 51.0°, making the average daily range 22.1°.

## PRECIPITATION.

The average precipitation was 4.22 inches, which is 1.47 inches above the normal. The greatest local monthly amount was 9.42 inches, at Conway; the least was 1.41 inches, at Walterboro. The greatest 24-hour rainfall was 3.32 inches, at Conway on the 22d-23d. The average number of days with rain was 6, ranging from 2 days at Ferguson to 9 days at Batesburg, Cheraw (1), Greenville, Pelzer, Spartanburg and Yemassee.

EXCESSIVE PRECIPITATION.—At Aiken on the 9th, 2.91 inches in 24 hours; at Beaufort on the 1st, 2.70 inches in 3 hours; at Conway on the 22d-23d, 3.32 inches in 22 hours; at Dillon on the 23d, 2.73 inches in 24 hours; at Yemassee on the 9th, 3.02 inches in 24 hours.

## WIND.

The prevailing wind was from the northeast at 27 stations, from the north at 10 stations, from the east at 3 stations, from the southwest at 2 stations and from the south and west at 1 station each.

## CLOUDINESS.

The average number of clear days was 19, of partly cloudy days 6, and of cloudy days 6.

## MISCELLANEOUS PHENOMENA.

SOLAR HALOS.—At Aiken, Liberty, and Santuc, on the 8th.

HIGH WINDS.—At Charleston on the 2d; at Liberty on the 22d, 23d; at Trial on the 21st, 22d.

DENSE SMOKE.—At Blackville on the 19th; at Camden, Clarks Hill, Columbia, Darlington, Georgetown, Liberty, Saluda, Santuc, Trial, Winthrop College, on the 20th; at Cheraw on the 18th, 20th; at Newberry on the 19th, 20th.

DENSE FOGS.—At Camden on the 10th, 11th; at Charleston on the 20th; at Clarks Hill, Columbia, on the 10th; at Georgetown on the 26th, 27th; at Jacksonboro on the 20th, 26th; at Liberty on the 10th, 11th, 24th; at Newberry, Santuc, Winthrop College, on the 11th.

LIGHT FROST.—The first light frost of the season occurred during the month at the following stations: At Blackville on the 29th; at Bowman, Trial, on the 15th; at Cheraw, Jacksonboro on the 13th; at Clarks Hill, Liberty, Santuc, Winthrop College, on the 4th; at Greenville, Saluda, on the 3d.

THUNDERSTORMS.—Thunderstorms occurred on six days, with two periods of maximum frequency, namely, on the 8th, 9th, 10th, and on the 27th, 28th, 29th, when from one to three of the six stations that recorded thunderstorms reported their occurrence.

## REMARKS BY OBSERVERS.

BEAUFORT: The month was pleasant, having had eighteen clear days. During the latter portion the sky was smoky, and heavy dews were noted each morning. —Miss E. G. RICE.

BOWMAN: The month was noteworthy for its pleasantness and small percentage of cloudiness, there having been 24 clear days. Light frosts occurred during the middle and near the close of the month, tho the resulting injury was slight. —B. O. EVANS.

LIBERTY: The smoke almost obscured the sun on the 20th. The weather was fine during the greater portion. The rainfall was heavy during the third decade. —JNO. T. BOGGS.

NEWBERRY: An unusually large meteor was observed to the northwestward at 7:35 p. m. on the 2d. The smoke was so dense on the 20th that it obscured the sun for a considerable time. Numerous light frosts occurred, but none was damaging. —W. G. PETERSON.

SANTUC: Clear weather predominated during the month, tho the rainfall was ample. The weather was generally cool, with light frost on two days that did no damage. —E. W. JETER.

SOCIETY HILL: The weather was favorable for harvesting all crops. The mean temperature was below the normal; the rainfall was in excess. —Maj. J. J. LUCAS.

SUMMERVILLE: The average relative humidity was 55 per cent. A slight earthquake tremor occurred at 11:10 p. m. of the 25th. —Miss E. H. GADSDEN.

TRENTON: The total precipitation since January 1st is 6.15 inches less than the average for the first ten months of the year. —C. A. LONG.

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION,

J. W. BAUER, Section Director.

Vol. XI. COLUMBIA, S. C., NOVEMBER, 1908. No. 10.

## GENERAL SUMMARY.

With one exception, the mean temperature was above the normal at every station, the departures ranging from less than one degree to over six degrees. This month was the third warmest November of record, the mean temperature having been higher in 1896 and in 1902, while 1899 and 1900 were nearly as warm. The coolest November occurred in 1901, when the mean temperature was  $48.2^{\circ}$ , or  $8.4^{\circ}$  below this year's mean, and  $11.0^{\circ}$  below the highest November mean in 1902. The precipitation was well distributed, but was below the normal at all but two stations, the deficiencies ranging from less than a quarter of an inch to nearly two and a half inches. The average rainfall was less in 1901, 1903, 1905 and 1906, the last year having been the driest of record. The heaviest rainfall occurred in 1898, tho 1896 and 1907 also had wet Novembers. No snow was recorded during this month.

The mean temperature was slightly above  $62^{\circ}$  in the extreme southern portion, and slightly below  $52^{\circ}$  in the extreme north-western portion. The western division was relatively warmer than the eastern. The first week was cool, with light to killing frosts on the 6th over the whole State, being the coldest day at many stations. This was followed by a decided warm wave, with high day temperatures from the 8th to the 11th, and the maximum temperatures for the month were recorded in the western and central divisions and at some stations in the eastern between those dates. This was, in turn, followed by a cool wave with killing frosts and thin ice, except on the immediate coast, on the 15th and 16th, these being the coldest days at most stations. The temperature ranged above the normal from the 17th to the end of the month, the greatest departures from the normal having occurred generally on the last three days.

The precipitation was heaviest along the coast and in the extreme northwestern portion where, over comparatively small areas, the monthly amounts were over two inches; there were also small areas in Barnwell, Saluda, Greenwood, Fairfield and York counties where slightly more than two inches were received; over the remainder of the State the monthly amounts ranged from about half an inch to nearly two inches. The precipitation was general on the 4th and 14th; light local rains occurred during the last decade in the eastern, southern and western divisions.

An unusual amount of dense fog was recorded from the 24th to the 30th, the fog areas on several days covering practically the whole State. There was slightly more than the usual amount of bright sunshine.

## TEMPERATURE.

The mean temperature was  $56.6^{\circ}$ , which is  $2.7^{\circ}$  above the normal. The highest local monthly mean was  $62.3^{\circ}$ , at Beaufort; the lowest was  $52.0$ , at Greenville. The monthly temperature extremes were  $88^{\circ}$  at Florence on the 10th, and  $24^{\circ}$  at Spartanburg on the 16th, making the State range  $64^{\circ}$ . The greatest

local monthly range was  $63^{\circ}$ , at Spartanburg; the least was  $39^{\circ}$ , at Beaufort. The mean of the daily maximum temperatures was  $68.0$ , and of the daily minimum temperatures was  $45.2$ , making the average daily range  $22.8$ .

## PRECIPITATION.

The average precipitation was 1.60 inches, which is 1.36 inches below the normal. The greatest local monthly amount was 3.09 inches, at Greenville; the least was 0.54 of an inch, at Bowman. The greatest 24-hour rainfall was 2.56 inches, at Charleston on the 14th. The average number of days with 0.01 of an inch or more of rain was three, ranging from one day at Aiken, Ferguson, Kingstree, St. George and Winnsboro to eight days at Greenville.

EXCESSIVE PRECIPITATION.—At Charleston on the 14th, 2.56 inches in 24 hours.

## WIND.

The prevailing wind was southwest at 14 stations, northeast at 8 stations, west, at 6 stations, north at 5 stations, east and south at 4 station each, northwest at 2 stations and southeast at 1 station.

## CLOUDINESS.

The average number of clear days was 16, of partly cloudy days 10 and of cloudy days 4.

## MISCELLANEOUS PHENOMENA.

HAIL.—At Spartanburg on the 14th.

LUNAR CORONAS.—At Blackville on the 29th.

LUNAR HALOS.—At Beaufort on the 1st; at Blackville on the 2d.

HIGH WINDS.—At Bowman and Charleston on the 5th; at Columbia on the 30th.

THUNDERSTORMS.—At Camden on the 4th; at Charleston on the 14th, 21st, 22d; at Jacksonboro and Liberty on the 11th; at Saluda on the 3d.

ICE.—The first thin ice of the season was reported at Camden on the 5th; at Clarks Hill, Columbia, Greenville, Liberty and Santuc on the 15th; at Newberry on the 6th; at Trial on the 13th.

FROSTS.—First light of the season at Charleston on the 6th: first killing of the season at Aiken, Allendale, Blairs, Bowman, Calhoun Falls, Chappells, Cheraw, Clarks Hill, Clemson College, Columbia, Effingham, Ferguson, Florence, Jacksonboro, Liberty, Newberry, St. George, St. Matthews, Santuc, Spartanburg, Summerville, Trial, Walterboro, Yemassee on the 6th; at Beaufort, Catawba and Winthrop College on the 5th; at Anderson, Batesburg, Blackville, Camden, Dillon, Georgetown, Greenville, Little Mountain, Pelzer, Saluda, Smiths Mills, Society Hill and Trenton on the 15th; at Conway, Greenwood, Kingstree and Winnsboro on the 16th.

DENSE FOGS.—At Beaufort, Bowman, Trenton on the 24th, 25th, 26th, 27th, 28th, 29th; at Blackville on the 3d, 10th, 23d, 24th, 25th, 26th, 28th, 30th; at Camden on the 24th, 26th, 27th, 30th; at Charleston, Jacksonboro, Yemassee on the 24th, 25th, 26th, 27th, 28th, 29th; at Cheraw, Society Hill, Winthrop College on the 24th, 25th, 26th, 27th, 30th; at Clarks Hill on the 26th, 27th, 28th, 29th; at Columbia on the 4th, 14th, 15th, 24th, 26th, 27th, 28th, 29th, 30th; at Conway, Smiths Mills on the 26th, 27th; at Effingham on the 29th; at Georgetown on the 24th, 25th, 26th; at Liberty on the 26th, 30th; at Little Mountain on the 26th, 27th, 29th, 30th; at Newberry on the 27th, 29th; at Saluda on the 24th, 25th, 26th, 29th; at Santuc on the 25th, 26th, 27th, 30th; at Spartanburg on the 26th, 30th; at Summerville on the 25th, 26th, 27th, 28th, 29th, 30th; at Trial on the 24th, 25th, 26th, 27th, 29th; at Walterboro on the 25th, 26th, 27th, 28th; at Rimini on the 24th, 25th, 26th, 27th, 29th.

## REMARKS BY OBSERVERS.

BATESBURG: The month was unusually warm and pleasant. Frequent dense fogs occurred from the 24th to the 30th.—E. J. HITE.

BEAUFORT: This month had a larger number of clear days than any November in the last 20 years, the next largest number having occurred in November, 1901, with 22 clear days. It was the third warmest November, 1896 and 1902 having had slightly higher mean temperatures. The last decade was pleasant, tho the mornings were foggy.—Miss E. G. RICE.

BOWMAN: The month was noteworthy in having received less rainfall than any November of record. Pleasant weather prevailed during the entire month. The first ice and killing frost occurred on the 6th.—B. O. EVANS.

LIBERTY: A cool spell on the 5th-6th was followed by warm and generally pleasant weather during the remainder of the month, favorable for outdoor work.—Jno. T. Boggs.

SANTUC: The month was generally dry, with more than the usual amount of cloudiness, and considerable haze; there were heavy fogs during the last week. The first killing frost occurred on the 6th, but the most damaging frosts and thin ice occurred on the 15th and 16th.—E. W. JETER.

SOCIETY HILL: This was the warmest November since 1902.—Maj. J. J. LUCAS.

SUMMERVILLE: The relative humidity for the month was 80 per cent.—Miss E. H. GADSDEN.

TRENTON: The total precipitation from January 1st to November 30th is 7.37 inches less than the normal for the first 11 months.—C. A. LONG.

NOTE.—All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. † Maximum thermometer not standard. ‡ Minimum thermometer not standard. § Exposed non-registering thermometer not standard. \* On other dates also. a. Indicates 1 day missing; b. 2 days, etc. ° The state of sky at 8 a. m. not used in averages.

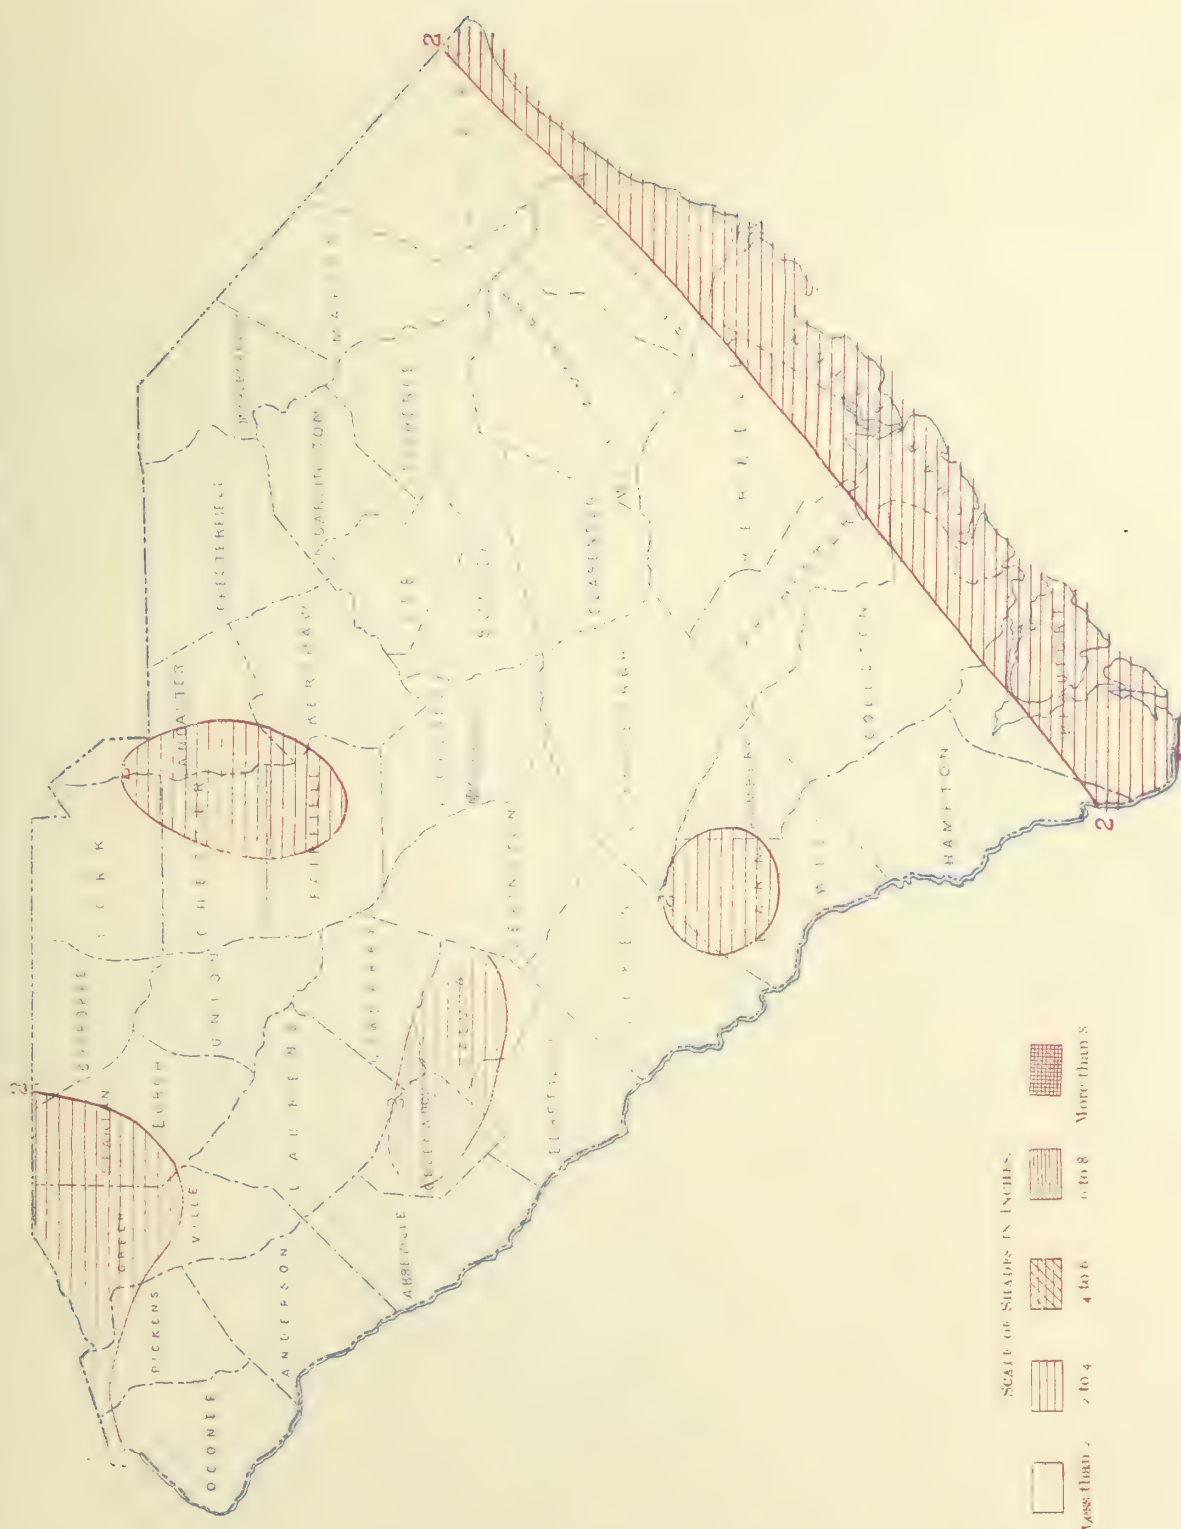

[illegible]

\* At these stations thermometers are read in the morning; the maximum temperatures then observed appear in the maximum column for the preceding day on which it nearly always occurs.  
† The data for Sundays and Mondays taken on Monday mornings and Monday evenings respectively.

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director.

Vol. XI. COLUMBIA, S. C., DECEMBER, 1908. No. 12.

## GENERAL SUMMARY.

The month was unusually mild, and there were no cold waves or extreme low temperatures; the precipitation, tho below the normal, was ample, and there was slightly more than the average amount of bright sunshine. It was the warmest December of record, the mean temperature having been over a degree higher than in 1898, which was the previous warmest December, and it was 5° higher than the normal. The coldest December occurred in 1903, with a mean of 41.0°, or nearly 10° lower than the present month. The rainfall was not so well distributed, having been deficient along the coast, where the departures below the normal ranged from one inch to over two and a half inches; it was slightly above the normal in the mountain districts, where the excess was generally small, tho slightly over an inch at one station. The average precipitation was greater than in 1897, 1899 or 1903, and was less than in any other December since 1894. The wettest December occurred in 1905 with 7.25 inches, and the driest in 1903 with 1.95 inches.

The mean temperature ranged from 57.4° in the extreme southern portion to 47.2° in the extreme northwestern portion, the decrease having been unusually uniform from the coast to the mountains. The highest temperatures for the month occurred at most stations on the 1st, being a continuation of the warm period at the close of November, and this was followed by a period of cool weather, with the daily mean temperatures generally below the normal, to the 11th, after which to the end of the month the temperature was above the normal, with a few unimportant exceptions. The 1st, 15th, 16th, 17th and 18th were the warmest days, and the coolest days were the 3d and 9th, the lowest temperatures having occurred generally on those days at all stations, with slightly below freezing temperatures on both dates except along the immediate coast.

The precipitation was less than two inches in the southern counties, and ranged from two inches to four inches in the central and northeastern counties, and was in excess of four inches in the northwestern portion, and was over six inches in the mountain districts. The average number of days with rain was smaller than usual, tho greater than in 1895 or 1903, and was the same as in 1894, 1896, 1899, 1902 and 1906. The precipitation was all in the form of rain except on the 25th, when a trace of snow, melting as it fell, was recorded in the northwestern counties; light hail was recorded at a few places on the same date.

## TEMPERATURE.

The mean temperature was 50.6, which is 5.0 above the normal. The highest local monthly mean was 57.4, at Beaufort; the lowest was 47.2, at Greenville. The monthly temperature extremes were 83 at Walterboro on the 1st, and 23 at Bowman on the 9th, making the State range 60.0°. The greatest local monthly range was 59, at Bowman; the least was 40°, at Beaufort and Charleston. The mean of the daily maximum temperatures was 60.8, and of the daily minimum temperatures was 40.5°, making the average daily range 20.3°.

## PRECIPITATION.

The average precipitation was 2.84 inches, which is 0.94 of an inch below the normal. The greatest local monthly amount was 5.90 inches, at Clemson College; the least was 0.94 of an inch, at Charleston. The greatest 24-hour rainfall was 2.65 inches, at Winthrop College on the 21st-22d.

EXCESSIVE PRECIPITATION.—At Santuc on the 21st-22d, 2.62 inches in 24 hours; at Winthrop College on the 21st-22d, 2.65 inches in 24 hours.

## WIND.

The prevailing wind was west and southwest at 12 stations each, northeast at 7 stations, northwest at 6 stations, north and southeast at 3 stations each, and south at 1 station.

## CLOUDINESS.

The average number of clear days was 13, of partly cloudy days 9, and of cloudy days 9.

## MISCELLANEOUS PHENOMENA.

SOLAR HALOS.—At Camden on the 10th.

PARHELION.—At Liberty on the 27th.

EARTHQUAKE.—At Summerville on the 28th.

HAIL.—At Liberty on the 22d; at Blackville, Bowman, Kingstree on the 25th; at Winthrop College on the 26th.

LUNAR HALOS.—At Beaufort on the 5th, 6th; at Blackville on the 1st; at Camden on the 5th; at Charleston on the 1st, 5th, 6th; at Liberty on the 20th; at Little Mountain on the 14th, 15th; at Santuc on the 4th, 5th; at Winthrop College on the 6th, 17th.

THUNDERSTORMS.—At Newberry on the 11th; at Bowman on the 12th, 25th; at Blackville, Charleston, Cheraw, Pinopolis, Santuc, Society Hill, Spartanburg, Summerville, Trial on the 25th; at Winthrop College on the 26th.

HIGH WINDS.—At Beaufort on the 25th, 26th; at Bowman on the 24th, 26th; at Camden on the 11th, 18th, 25th; at Charleston on the 12th; at Cheraw, Columbia, Saluda, Trial on the 25th; at Liberty on the 22d, 25th, 26th, 27th; at Newberry on the 18th; at Winthrop College on the 26th.

DENSE FOGS.—At Beaufort, Spartanburg on the 22d; at Bowman, Trial on the 17th; at Camden, Clarks Hill on the 17th, 31st; at Cheraw on the 28th; at Columbia on the 17th, 30th, 31st; at Georgetown on the 15th, 16th; at Jacksonboro on the 1st; at Liberty on the 23d, 31st; at Santuc, Winthrop College on the 20th.

## ERRATA.

The following corrections should be made in the October, 1908, number of the Monthly Reports: On page 77, at Bowman, the monthly mean temperature 64.3 should be 63.3; at Greenville, the monthly mean temperature 58.2 should be 58.6.

## REMARKS BY OBSERVERS.

BEAUFORT: The mean maximum temperature was higher than has been previously recorded in any December since 1889, the nearest record being 63.1° in 1902. The weather was very pleasant, having been more like autumn than like winter.—Miss LILLIAN H. RICE.

BOWMAN: The month was unusually dry; streams and ponds remain at low stages, many of the ponds being quite dry.—B. O. EVANS.

CAMDEN: The weather was unusually warm.—J. B. MICKLE.

LIBERTY: There were frequent, well distributed rains, and the temperature was mild. There were a number of windy days, the 25th having been particularly windy.—JOHN T. BOGGS.

SANTUC: The temperature was mild and the precipitation ample, with about the average amount of cloudiness. There was a thunderstorm on the 25th during the progress of a snowstorm, and the accompanying winds blew down trees.—E. W. JETER.

SOCIETY HILL: Both the precipitation and the temperature were above the normal.—MAJ. J. J. LUCAS.

SUMMERVILLE: The average relative humidity was 76°. There was a slight earthquake on the 28th at 6:24 a. m.—Miss E. H. GADSDEN.

TRENTON: The precipitation since January 1st, 1908, is 8.17 inches less than the normal for the year.—C. A. LONG.

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION.

J. W. BAUER, Section Director.

Vol. XII. COLUMBIA, S. C., JANUARY, 1909. No. 1.

## GENERAL SUMMARY.

The first decade had about normal temperature, the second and most of the third decades were unusually warm, and a severe cold wave occurred on the last two days, causing lower temperatures than have been recorded since 1903; the precipitation was below the normal over the whole State, and the sunshine was slightly above the normal. It was the second warmest January of record, the mean temperature having been 53.4° in 1907, or 3.8° higher than this month, while in 1898 the month was nearly as warm, the mean temperature having been 49.2°. The coolest January was that of 1904, when the mean was 40.2°. It was also the second driest January, the average precipitation in 1907 having been only 0.70 of an inch, or less than half the amount recorded this month. The three wettest Januarys occurred in 1895, 1898 and 1906, with 7.31, 4.72 and 5.85 inches, respectively.

The mean temperature ranged from nearly 56° in the extreme southern portion to slightly above 44° in the extreme northwestern portion, the difference in mean temperature between these sections having been somewhat greater than usual. The gradation in temperatures from the coast to the coast to the mountains was uniform. The highest temperatures were recorded at all stations from the 10th to the 20th, the 14th, 17th and 19th having been the warmest days at a majority of stations. The highest temperature was 83°, which equalled the previous high temperature record, except in 1907 when 87° was recorded. The lowest temperatures were all recorded on the 31st in connection with a cold wave that caused freezing temperatures over the entire State. The minimum temperature fell to, or below, freezing on from 12 to 15 days in the western counties and on from 1 to 4 days along the coast.

The precipitation was less than two inches over the greater portion, the amounts increasing to slightly over four inches in the northwestern counties. There was a small area covering Florence county that received between two and three inches. There were two generally rainy periods; the first began on the 4th and ended on the 6th, and the second period began on the 12th and ended on the 17th. In addition to these periods there was a fairly general tho quite light rainfall on the 29th. The precipitation was practically all in the form of rain. One station recorded a trace of snow, and three stations recorded sleet on one day. The average number of days with rain this year, and in 1902, was 5. The smallest number of rainy days was 4 in 1907; during other years the average number ranged from 6 to 13 days.

## TEMPERATURE.

The mean temperature was 49.6, which is 5.2° above the normal. The highest local monthly mean was 55.6°, at Beaufort; the lowest was 44.5, at Greenville. The monthly temperature extremes were 83° at Blackville on the 24th, and at Walterboro on the 25th, and 9° at Heath Springs on the 31st, making the State range 74°. The greatest local monthly range was 69° at Allendale, Blackville, Clarks Hill, Georgetown and Society Hill; the least was 59°, at Beaufort and Charleston. The mean of the daily maximum temperatures was 59.7, and of the daily minimum temperatures was 39.6, making the average daily range 20.1°.

## PRECIPITATION.

The average precipitation was 1.54 inches, which is 2.09 inches below the normal. The greatest local monthly amount was 4.74 inches, at Clemson College; the least was 0.50 of an inch at Ferguson. The greatest 24-hour rainfall was 1.70 inches at Clemson College on the 16th. The average number of days with .01 or more precipitation was 5, ranging from 1 day at Ferguson to 10 days at Greenville and Pelzer.

EXCESSIVE PRECIPITATION.—None occurred.

## WIND.

The prevailing wind was northeast at 18 stations, north at 8 stations, west at 6 stations, southwest at 4 stations, east at 3 stations, and southeast, south and northwest at 2 stations each.

## CLOUDINESS.

The average number of clear days was 12, of partly cloudy days 9, and of cloudy days 10.

## MISCELLANEOUS PHENOMENA.

PARHELION.—At Santuc on the 3d.

DENSE SMOKE.—At Trial on the 27th, 28th.

LUNAR CORONA.—At Winthrop College on the 11th.

SNOW.—A trace of snow fell at Newberry on the 9th.

SLEET.—Sleet occurred at Liberty, Santuc and Spartanburg on the 13th.

LUNAR HALOS.—At Camden on the 4th, 5th; at Winthrop College on the 5th.

THUNDERSTORMS.—At Beaufort on the 5th; at Bowman on the 4th; at Georgetown on the 14th.

HIGH WINDS.—At Beaufort, Bowman, Camden, Liberty, Trial on the 29th, 20th, 31st; at Blackville on the 29th; at Charleston, Cheraw, Clarks Hill, Columbia on the 30th, 31st; at Ferguson on the 31st; at Heath Springs, Newberry on the 29th, 30th; at Saluda on the 28th, 29th, 30th; at Spartanburg on the 7th, 29th, 30th; at Winthrop College on the 28th, 29th.

DENSE FOGS.—At Beaufort on the 14th, 21st, 24th; at Blackville on the 13th, 15th, 20th, 21st, 23d; at Bowman on the 3d, 13th, 14th, 15th, 29th, 21st; at Camden on the 5th, 11th, 12th, 14th, 15th, 21st, 22d, 23d, 24th; at Charleston on the 6th, 14th, 15th, 20th, 24th; at Columbia on the 15th, 21st, 22d, 24th; at Georgetown on the 5th, 6th, 14th, 15th, 24th; at Liberty on the 4th, 6th, 12th, 14th, 15th, 16th, 21st, 22d; at Little Mountain on the 13th, 14th, 15th, 16th; at Newberry on the 11th, 14th, 21st, 22d, 24th; at Pelzer on the 6th, 21st; at Rimini on the 23d, 24th; at Saluda on the 14th, 15th; at Santuc on the 14th, 15th, 22d; at Spartanburg on the 11th, 15th; at Winthrop College on the 6th, 14th, 15th, 16th, 22d.

## REMARKS BY OBSERVERS.

BEAUFORT: The highest temperature exceeded the record for the last 19 years, and the lowest temperature fell below the record for the last 5 years. As a whole the month was dry and warm. The freezing temperatures on the last two days did extensive damage. Owing to the dryness numerous forest fires occurred. The need of rain was urgent at the end of the month.—Miss LILLIAN H. RICE.

BOWMAN: The month was noteworthy for the large number of cloudy days and its scant precipitation. Streams and ponds continue unusually low. Occasional jasmine blooms were noted. Maple trees were in bloom on the 15th.—B. O. EVANS.

SANTUC: The month was dry and mild, tho ending with a cold wave. The weather was unseasonably warm during the second half until the 29th.—E. W. JETER.

SUMMERVILLE: The relative humidity for the month was 77 per centum. Extremely high winds prevailed during the 29th.—Miss E. H. GADSDEN.

## ERRATA.

The following correction should be made in the November, 1908, Monthly Report: On page 85, at Little Mountain, the highest temperature and date, 76 on the 9th, should be 77 on the 11th.

NOTE.—All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. † Maximum thermometer not standard. ‡ Minimum thermometer not standard. § Exposed non-registering thermometer not standard. \* On other dates also. a. Indicates 1 day missing; b. 2 days, etc. ° The state of sky at 8 a. m. not used in averages.

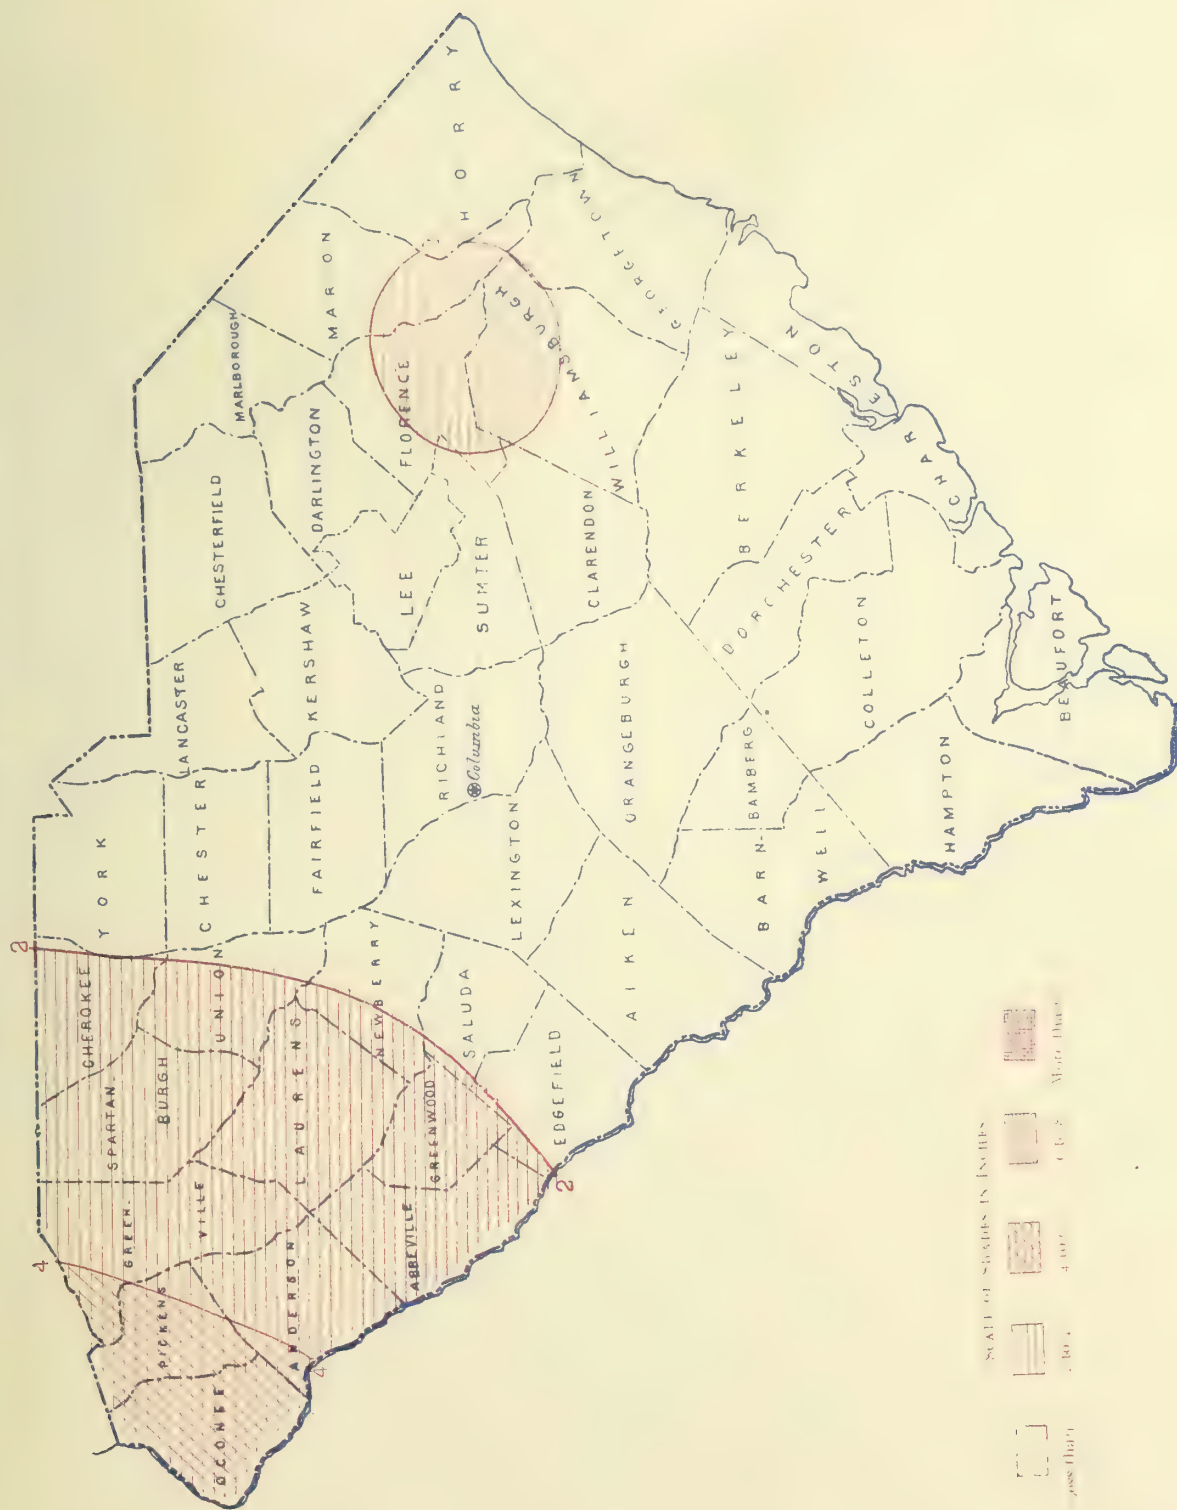

DAILY MAXIMUM AND MINIMUM TEMPERATURES DURING JANUARY, 1909.

[illegible]

\* At these stations thermometers are read in the morning; the maximum temperatures then observed appear in the maximum column for the preceding day on which it nearly always occurs.  
† The data for Sundays and Mondays taken on Monday mornings and Monday evenings respectively.

# TOTAL PRECIPITATION FOR JANUARY, 1909

## DAILY PRECIPITATION FOR SOUTH CAROLINA, JANUARY, 1909.

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION,

J. W. BAUER, Section Director.

Vol. XII. COLUMBIA, S. C., FEBRUARY, 1909.

No. 2.

## GENERAL SUMMARY.

The month was unusually mild, with nearly normal precipitation and more than the usual amount of bright sunshine. The first two days were cold, being a continuation of the January cold wave, and the latter part of the third decade was cool, the remainder of the month having been decidedly warmer than usual. It was the warmest February of record, the mean temperature having been  $2.2^{\circ}$  higher than the previous highest, which was  $50.0^{\circ}$  in 1897. The lowest February mean temperature was  $37.4$  in 1895. The range in mean temperatures during the last fifteen years for this month is  $14.8^{\circ}$ . The average precipitation was nearly normal, and was exceeded in amount in eight of the last fifteen years. The wettest February was that of 1897, with an average of 7.80 inches; the driest was that of 1898, with 0.86 of an inch. The greatest local amount in any February during the last fifteen years was 12.48 inches at Clemson College in 1903; the least was 0.34 of an inch at St. George in 1898.

The temperature was much below the normal on the first two days, followed by a warm wave that prevailed to the 24th, interrupted by moderate cool waves with freezing temperatures over the western divisions on the 8th, 11th and 17th. The last week had variable temperatures, generally below the normal. The lowest temperatures for the month were recorded at all stations on the 1st; the highest temperatures were recorded on the 6th and 15th at a few stations, tho the period from the 21st to the 24th, inclusive, was the warmest part of the month, with departures from the normal ranging from  $10^{\circ}$  to over  $20^{\circ}$ . No freezing temperatures occurred along the immediate coast after the 1st.

The precipitation was well distributed except in the coast region, where the monthly amounts were generally below two inches, being from an inch to nearly two inches below the normal. Over the greater portion of the State the amounts received ranged from 4 to 6 inches, exceeding 6 inches in Florence County, and in the Savannah valley from Edgefield to Oconee County. There was a small deficiency in Fairfield County, and a slight excess in western Lexington County. The precipitation was all in the form of rain, except flurries of snow on one day in the extreme northwestern portion. An unusually large number of thunderstorms occurred during the month, having been especially numerous on the 5th-6th, 10th, 19th and 22d.

The prevailing direction of wind was normal, and the wind movement slightly greater than normal. A noteworthy feature of the weather was the exceptionally low percentage of relative humidity on a number of days thruout the month.

## TEMPERATURE.

The mean temperature was  $52.2^{\circ}$ , which is  $6.2^{\circ}$  above the normal. The highest local monthly mean was  $55.2^{\circ}$  at Beaufort; the lowest was  $47.6$  at Greenville. The monthly temperature extremes were  $84^{\circ}$  at Blackville on the 22d, and at Bowman on the 23d, and  $12^{\circ}$  at Liberty and St. Matthews on the 1st, making the monthly range  $72^{\circ}$ . The greatest local monthly range was  $70^{\circ}$  at Bowman; the least was  $50^{\circ}$  at Georgetown. The mean of the daily maximum temperatures was  $63.8^{\circ}$ , and of the daily minimum temperatures  $40.5^{\circ}$ , making the average daily range  $23.3^{\circ}$ .

## PRECIPITATION.

The average precipitation was 4.49 inches, which is 0.14 of an inches below the normal. The greatest local monthly amount was 7.42 inches at Calhoun Falls; the least was 1.86 inches at Charleston. The greatest 24-hour rainfall was 2.67 inches at Allendale on the 10th. The average number of days with rain was 8, ranging from 5 days at Bowman, Pinopolis and St. George to 13 days at Anderson.

EXCESSIVE PRECIPITATION.—At Allendale on the 10th, 2.67 inches in 24 hours; at St. Matthews on the 9th, 2.40 inches in 4 hours.

## WIND.

The prevailing wind was southwest at 17 stations, west at 16 stations, northwest at 5 stations, south at 3 stations, north and southeast at 2 stations each and east at 1 station.

## CLOUDINESS.

The average number of clear days was 15, of partly cloudy days 7, and of cloudy days 6.

## MISCELLANEOUS PHENOMENA.

DENSE FOGS.—At Charleston on the 22d.

LUNAR CORONA.—At Winthrop College on the 4th, 12th.

HAIL.—At Anderson on the 21st; at Batesburg and Johnston on the 23d.

LUNAR HALOS.—At Beaufort, Charleston, Winthrop College on the 27th; at Blackville on the 26th; at Camden on the 6th.

HIGH WINDS.—At Beaufort on the 9th, 10th; at Bowman on the 6th, 7th, 9th, 10th, 11th, 16th, 19th; at Charleston on the 6th; at Camden on the 7th, 9th, 10th, 15th, 16th, 19th, 24th; at Cheraw on the 10th 16th; at Columbia on the 6th, 7th, 9th, 10th, 19th, 20th, 24th, 25th, 27th; at Georgetown on the 5th, 7th, 9th, 10th, 24th; at Heath Springs on the 10th, 19th; at Jacksonboro on the 7th, 15th, 19th; at Liberty on the 7th, 10th, 24th; at Newberry on the 10th; at Saluda on the 7th, 9th, 16th, 17th, 19th; at Smiths Mills on the 9th, 10th, 11th; at Summerville on the 6th, 10th, 19th, 23d; at Trial on the 5th, 7th, 9th, 10th, 16th, 19th, 23d; at Winthrop College on the 23d, 24th, 25th.

THUNDERSTORMS.—An unusually large number of thunderstorms occurred, twenty-seven stations having reported 79 thunderstorms during the month, distributed as follows: Eight on the 5th, 14 on the 6th, 1 on the 7th, 4 on the 9th, 14 on the 10th, 1 on the 11th, 3 on the 15th, 1 on the 16th, 14 on the 19th, 1 on the 20th, 6 on the 21st, 9 on the 22d and 3 on the 23d.

## REMARKS BY OBSERVERS.

BEAUFORT.—Severe frosts occurred on the 1st and 2d. There were frequent high winds, with an estimated velocity of 40 miles per hour on the 10th. The first thunder storm of the year occurred on the 19th. The month was remarkable in that not a day was cloudy.—Miss LILLIAN H. RICE.

BOWMAN.—The month was noteworthy for the many clear days, only one day having been cloudy. There was a large number of windy days.—B. O. EVANS.

GREENVILLE.—A flurry of snow fell on the 7th.—Mrs. S. A. CRITTENDEN.

LIBERTY.—There were unusually large numbers of thunderstorms and high winds for the month. Peach, plum and pear trees began to bloom.—JOHN T. BOGGS.

SANTUC.—The temperature on the 1st was the lowest for the season, and the lowest for several years; the remainder of the month was mild, and particularly noteworthy on account of the numerous thunderstorms that occurred.—E. W. JETER.

SUMMERVILLE.—Extremely high winds prevailed on the 6th and moderately high on the 11th. A high wind and rain storm swept a part of the village on the 19th, uprooting trees, while the rest of the village experienced only moderate rainfall and light winds. A slight earthquake occurred about 11 p. m. of the 25th. Relative humidity, 65 per cent.—Miss E. H. GADSDEN.

TRENTON.—The total precipitation since January 1st is 3.63 inches less than the normal for the same period. Heavy hail fell at Johnston, S. C., on the 5th.—C. A. LONG.

U. S. DEPARTMENT OF AGRICULTURE,

## CLIMATOLOGICAL SERVICE

OF THE

## WEATHER BUREAU.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION,

J. W. BAUER, Section Director.

Vol. XII.

COLUMBIA, S. C., MARCH, 1909.

No. 3.

## GENERAL SUMMARY.

The temperature was variable, with frequent and some severe changes. The extremes were well within previous limits, and the monthly mean was slightly below the normal. The number of rainy days was larger than usual, and the average precipitation was slightly above the normal. The monthly mean temperature for the same month was lower on six previous years. The lowest March mean was  $51.6^{\circ}$ , in 1906. Higher mean temperatures occurred in nine years. The highest was  $62^{\circ}$ , in 1907. The range in mean temperature for March is  $10.4^{\circ}$  in the last sixteen years. The highest March maximum was  $93^{\circ}$ , in 1896; the lowest minimum was  $10^{\circ}$ , in 1901. The average precipitation was greater than in twelve of the last sixteen years, having exceeded this month's amount only in 1895, 1903, and 1906. The largest amount, 5.92 inches, having been received in 1903. The largest local amount was 11.14 inches, at Batesburg, in 1903; the least was a trace, at Shaws Forks, in 1896.

The monthly mean temperature varied but little from the normal in any portion of the State, the departures having been generally less than a degree at a majority of stations. The highest temperatures were recorded in the southern portion, where they ranged in the eighties; in the extreme northwestern portion they ranged in the seventies, being below  $70^{\circ}$  at only one station. The 7th, 8th, 9th, and 28th were the warmest days. The highest temperature was recorded on the 9th at most stations. There were two cool periods of comparatively short duration. The lowest temperatures occurred on the 4th, 5th, 15th, and 16th. Frosts occurred on those days that were heavy to killing over the greater portion of the State to within a few miles of the coast, where only light frosts in spots were observed. Thirty-one of the forty stations recording temperature noted minimum temperatures of  $32^{\circ}$  or below. The mean of the daily minimum temperatures was the second lowest of record.

The precipitation was heaviest on the southern coast, where, over a small area, over 10 inches was reported. Nearly as much rain fell in the extreme western portion, while in the northeastern portion the rainfall was below 2 inches over a small area. The larger portion of the State received from 3 to 5 inches. The average number of rainy days was the second largest of record, having been exceeded only in 1897.

The wind direction was normal, and the wind movement slightly above normal. The percentage of sunshine was below the normal.

## TEMPERATURE.

The mean temperature was  $54.1^{\circ}$ , which is  $0.8^{\circ}$  below the normal. The highest local mean was  $58.7^{\circ}$  at Walterboro; the lowest was  $50^{\circ}$  at Greenville. The monthly extremes were  $90^{\circ}$

at Allendale on the 9th, and  $27^{\circ}$  at Bowman on the 4th and at Dillon and Heath Springs on the 5th, making the State range  $63^{\circ}$ . The greatest local monthly range was  $61^{\circ}$  at Bowman; the least was  $36^{\circ}$  at Charleston. The mean of the daily maximum temperatures was  $64.9^{\circ}$ , and of the daily minimum temperatures  $43.3^{\circ}$ , making the average daily range  $21.6^{\circ}$ .

## PRECIPITATION.

The average precipitation was 4.80 inches, which is 0.63 of an inch above the normal. The greatest local monthly amount was 10.06 inches at Jacksonboro; the least was 1.54 inches at Dillon. The greatest 24-hour rainfall was 4.41 inches at Yemassee on the 20th-21st. The average number of rainy days was 11, ranging from 7 days at Ferguson to 15 days at Cheraw and Summerville.

EXCESSIVE PRECIPITATION.—At Jacksonboro on the 21st, 4.30 inches in 24 hours; at Yemassee on the 20th-21st, 4.41 inches in 22 hours.

## WIND.

The prevailing wind was southwest at 12 stations, west and northwest at 9 stations each, north and northeast at 6 stations each, south at 4 stations, and east at 1 station.

## CLOUDINESS.

The average number of clear days was 14, of partly cloudy days 8, and of cloudy days 9.

## MISCELLANEOUS PHENOMENA.

LUNAR CORONA.—At Blackville on the 1st.

SOLAL HALOS.—At Camden on the 1st, 9th; at Saluda on the 1st.

LUNAR HALOS.—At Camden and Liberty on the 28th; at Columbia on the 4th, 28th; at Little Mountain on the 4th; at Winthrop College on the 6th, 8th, 11th, 29th.

HAIL.—At Blackville on the 24th; at Columbia on the 21st, 25th; at Greenville and Liberty on the 25th; at Little Mountain, Newberry, and Saluda on the 3d, 25th.

DENSE FOGS.—At Camden on the 3d, 7th, 13th; at Charleston on the 13th; at Columbia on the 3d, 7th; at Georgetown and Society Hill on the 7th; at Heath Springs on the 21st; at Liberty on the 14th; at Trial on the 7th, 16th, 18th; at Winthrop College on the 3d, 7th, 12th, 21st.

HIGH WINDS.—At Blackville, Bowman, Charleston, Columbia, Georgetown, Greenville, Greenwood, Heath Springs, Jacksonboro, Liberty, Newberry, Pelzer, Pinopolis, Santuc, Spartanburg, Trenton, and Trial on the 25th; at Camden on the 3d, 9th, 25th; at Clarks Hill and Saluda on the 3d, 25th; at Summerville and Winthrop College on the 10th, 25th; at Walhalla on the 25th, 28th.

KILLING FROSTS.—The latest killing frosts for the month occurred as follows, namely, at Anderson on the 26th; at Bowman, Camden, Columbia, Conway, Spartanburg, and Walhalla on the 16th; at Clarks Hill, Heath Springs, Newberry, and Saluda on the 18th; at Little Mountain and Winthrop College on the 31st.

THUNDERSTORMS.—Thunderstorms occurred on 12 days. There were four periods of maximum frequency, namely, on the 9th, 21st, 25th, and 28th, when from five to eight of the eighteen stations that recorded thunderstorms reported their occurrence. They were comparatively infrequent on the 1st, 2d, 3d, 6th, 10th, 20th, 24th, and 27th, when from one to three stations reported their occurrence.

## ERRATA.

The following correction should be made in the January, 1909, number of the Monthly Report, namely, on page 5, at Clarks Hill, the monthly mean temperature, 50.8, should be 49.4; on page 6, at Clarks Hill, the mean minimum, 39.3, should be 36.7.

## REMARKS BY OBSERVERS.

AIKEN.—A severe storm occurred on the morning of the 25th that blew down a large number of tall pine trees in this vicinity; the wind was from the southwest.—C. F. McGAHAN, M. D.

BEAUFORT.—The month was exceptionally rainy, nearly double the normal amount of rain having fallen. The cloudiness was above the average. The wind direction was variable and the wind movement greater than usual.—Miss LILLIAN H. RICE.

BOWMAN.—An unusually large portion of the precipitation occurred at night. The streams averaged normal flow thruout the month.—B. O. EVANS.

GREENWOOD.—On the morning of the 25th, between 12:30 and 1 a. m., a tornado occurred, killing one man and destroying about \$5,000 worth of property on the outskirts of Greenwood.—M. M. CALHOUN.

LIBERTY.—The month was wet and windy, with frequent frosts. Peach trees bloomed thruout the month and escaped serious injury from the weather conditions.—JOHN T. BOGGS.

NEWBERRY.—A severe storm occurred about 2 a. m. of the 25th, tornadic in character, that blew down one house and did considerable damage otherwise.—W. G. PETERSON.

SANTUC.—There was no very cold period during the month; heavy frosts occurred on the 5th and 16th, but light winds prevented killing frost on those days. A severe storm occurred on the morning of the 25th, during which the winds were tornadic in character.—E. W. JETER.

SUMMERVILLE.—The mean relative humidity for the month was 63 per cent. The 3d, 10th, 24th, and 25th were windy days.—Miss E. H. GADSDEN.

TRENTON.—A severe wind, thunder, and rain storm occurred at 2:30 a. m. of the 25th. The precipitation since January 1st is 0.99 of an inch above the normal for the same period.—C. A. LONG.

CENTRAL OFFICE: WASHINGTON, D. C.

SOUTH CAROLINA SECTION,

J. W. BAUER, Section Director.

Vol. XIII.

COLUMBIA, S. C., APRIL, 1909.

No. 4.

**GENERAL SUMMARY.**

The temperature was favorable throughout the month, the precipitation generally ample, the sunshine about normal, and the prevailing wind was, as usual, from the southwest.

Compared with previous years, this April was the fourth warmest in the last 15 years, higher mean temperatures having been recorded in 1896, 1906, and 1908. The highest monthly mean was  $66.9^{\circ}$  in 1896; the lowest April mean was  $56.0^{\circ}$  in 1901. The highest April maximum was  $98^{\circ}$  in 1896; the lowest minimum was  $20^{\circ}$  in 1907.

The monthly mean temperature varied greatly in different parts of the State. The greatest departures occurred in the east central and in the northwestern portions, where they ranged from  $3^{\circ}$  to over  $4^{\circ}$  above the normal; the west central portion had nearly normal temperatures, the departures ranging from  $0.5^{\circ}$  to  $1.5^{\circ}$ . The highest temperatures occurred in the eastern division and in the Savannah valley. The 5th, 6th and 18th were generally the warmest days. The lowest temperatures occurred in the extreme northeastern and in the northwestern portions, where below freezing temperatures were recorded on the 10th, which was generally the coolest day, killing frost and thin ice having been recorded in the western division and light frost eastward to the immediate coast.

The precipitation was heaviest in the eastern division, where the local amounts ranged from four to over six inches, except in the extreme eastern counties bordering on North Carolina and in the southernmost portion, where the amounts ranged from two to three inches; the central counties received the least rainfall, the amounts ranging from less than an inch to about three inches; the mountain districts received over four inches. About the usual number of rainy days occurred.

**TEMPERATURE.**

The mean temperature was  $63.9^{\circ}$ , which is  $2.6^{\circ}$  above the normal. The highest local mean was  $67.5^{\circ}$ , at St. George; the lowest was  $60.8$ , at Greenville. The monthly extremes were  $96^{\circ}$  at Florence, on the 18th, and  $30^{\circ}$  at Dillon, on the 10th, making the State range  $66^{\circ}$ . The greatest local monthly range was  $63^{\circ}$ , at Florence; the least was  $41^{\circ}$ , at Charleston. The mean of the daily maximum temperatures was  $75.1^{\circ}$ , and of the daily minimum temperatures  $52.7^{\circ}$ , making the average daily range  $22.4^{\circ}$ .

**PRECIPITATION.**

The average precipitation was 2.95 inches, which is 0.19 of an inch below the normal. The greatest local monthly amount was 6.20 inches, at Effingham; the least was 0.68 of an inch, at Blairs. The greatest 24-hour rainfall was 3.60 inches, at Allendale, on the 26th. The average number of rainy days was seven, ranging from three days at Allendale, Batesburg, Blairs and Chappells, to 11 days at Blackville and Columbia.

**EXCESSIVE PRECIPITATION.** At Allendale, on the 26th, 3.60 inches in 24 hours; at Ferguson, on the 2nd, 2.95 inches in 24 hours; at Georgetown, on the 1st, 2.53 inches in 24 hours; at Liberty, on the 30th, 3.29 inches in three hours; at Greenville, on the 30th, 4.85 inches in four hours; at Walhalla, on the 30th, 3.00 inches in one hour.

**WIND.**

The prevailing wind was southwest at 18 stations, south at nine stations, southeast at five stations, northeast, east and west at four stations, north at two stations, and northwest at one station.

**CLOUDINESS.**

The average number of clear days was 14; of partly cloudy days, nine, and of cloudy days, seven.

**MISCELLANEOUS PHENOMENA.**

**HAIL.**—At Anderson and Clarks Hill on the 30th; at Blackville on the 22nd.

**LUNAR HALOS.**—At Camden on the 26th, 29th; at Charleston on the 30th; at Liberty on the 24th; at Walhalla on the 2nd; at Winthrop College on the 1st, 15th.

**SOLAR HALOS.**—At Camden on the 1st, 21st; at Liberty on the 13th; at Santuc on the 21st.

**DENSE FOGS.**—At Blackville on the 14th; at Camden on the 15th, 19th; at Cheraw on the 19th; at Georgetown on the 27th; at Jacksonboro and Winthrop College on the 15th; at Liberty and Santuc on the 26th; at Trial on the 15th, 16th, 18th, 19th, 29th.

**FROSTS.**—Light to heavy frosts occurred in the northern portions on the 1st, 4th, 5th, 6th; a general frost that was killing in the western portion, heavy in the central division, and light on the coast, occurred on the 10th, followed by light frost in places on the 11th. No frost occurred after the 11th.

**HIGH WINDS.**—At Bowman on the 4th; at Camden on the 3rd, 23rd; at Charleston on the 11th; at Columbia on the 23rd; at Effingham, Georgetown, Liberty and Pelzer on the 30th; at Heath Springs on the 3rd; at Jacksonboro on the 3rd, 16th, 30th; at Santuc on the 3rd, 4th, 5th; at Trial on the 2nd, 3rd; at Walhalla on the 3rd, 5th, 11th.

**THUNDERSTORMS.**—Thunderstorms occurred on 9 days. There were two periods of maximum frequency, namely, on the 22nd and 23rd and on the 30th, when from 5 to 10 of the 15 stations that recorded thunderstorms reported their occurrence. They were comparatively infrequent on the 7th, 13th, 14th, 24th, 25th and 26th, when from 1 to 3 stations reported their occurrence.

NOTE.—All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. † Maximum thermometer not standard. ‡ Minimum thermometer not standard. § Exposed non-registering thermometer not standard. \* On other dates also. a, Indicates 1 day missing; b, 2 days, etc. ° The state of sky at 8 a. m. not used in averages.

THE PROX.

[illegible]

\* At these stations thermometers are read in the morning; the maximum temperatures then observed appear in the maximum column for the preceding day on which it nearly always occurs.

† The data for Sundays and Mondays taken on Monday mornings and Monday evenings respectively.

SCALE OF SHADINGS IN INCHES.

Vol. XIV. COLUMBIA, S. C., MAY, 1909.

No. 5.

## GENERAL SUMMARY.

Generally favorable temperatures prevailed throughout the month, the precipitation was ample over all but a small portion of the State, and there was abundant sunshine, and few destructive winds or hail storms, and but small damage by floods.

Compared with previous years, the month was cooler. Lower mean temperatures were recorded only in 1895 and 1897, the former having been the coolest May on record, with a mean temperature of 69.0°. The warmest May occurred in 1898, when the mean temperature was 73.8°. The mean of the daily maximum temperatures was lower only in 1895, and the mean of the daily minimum temperatures was lower in 1897 and in 1904. The highest May maximum was 104° in 1896; the lowest minimum was 30° in 1906.

The range in monthly mean temperature was comparatively small, having been only about 6°. The south central counties recorded the highest mean temperatures, where it was slightly above the normal; the lowest occurred in the extreme north-western portions, where the greatest minus departures were recorded. The period from the 1st to the 4th, inclusive, was the coolest portion of the month and slight frosts were noted at a few places during this time; the highest temperatures were recorded from the 29th to the 31st, inclusive.

The precipitation was heaviest in the extreme north-western portion where it exceeded eight inches over a small area; it decreased gradually eastward to the coast where it was less than two inches, although small areas in the eastern and the southeastern portions received over six inches. General rains occurred on the 1st, 18th to 22nd, and 27th-28th; scattered showers, some of them moderately heavy, fell on the 3rd to 5th, 17th, 25th-26th and 29th to 31st; and light local showers on a number of other days. There were about the usual number of rainy days, and of days with thunderstorms. A few hailstorms occurred, but none was destructive.

## TEMPERATURE.

The mean temperature was 69.5°, which is 1.7 below the normal. The highest local mean was 73.8° at St. George; the lowest was 65.8° at Clemson College. The monthly extremes were 100° at Florence on the 30th, and 35° at Spartanburg on the 2nd, making the state range 65°. The greatest local monthly range

was 59° at Spartanburg, the least was 38° at Charleston. The mean of the daily maximum temperatures was 80.8, and of the daily minimum temperatures 58.2, making the average daily range 22.6.

## PRECIPITATION.

The average precipitation was 4.76 inches, which is 1.03 inches above the normal. The greatest local monthly amount was 8.89 inches at Greenville; the least was 1.54 inches at Charleston. The greatest 24-hour rainfall was 4.85 inches at Greenville on the 1st. The average number of rainy days was 8, ranging from five days at Aiken, Blairs and Clarks Hill to 13 days at Greenville and Santuc.

**EXCESSIVE PRECIPITATION.**—At Camden (1), on the 20th-21st, 2.79 inches in about 15 hours; at Clemson College on the 1st, 3.30 inches in 24 hours; at Greenville, on the 1st, 4.85 inches in 24 hours; at Heath Springs on the 20th, 3.00 inches in 24 hours; at Liberty on the 1st, 3.20 in 24 hours; at Newberry on the 20th, 4.23 inches in 12 hours and 2.00 inches in two hours; at Pelzer on the 20th-21st, 3.06 inches in 19 hours; at Pinopolis on the 27th, 2.81 inches in 24 hours; at Smiths Mills on the 20th-21st, 3.18 inches in 24 hours; at Spartanburg on April 30th; 2.63 inches in six hours; at Trenton on the 18th-19th, 2.67 inches in 24 hours; at Walhalla on the 20th, 3.00 inches in 24 hours; at Walterboro on the 19th-20th, 2.62 inches in about 12 hours; at Winnsboro on the 20th, 3.12 inches in 24 hours; at Winthrop College on the 1st, 3.35 inches in 24 hours.

## WIND.

The prevailing wind was southwest at 18 stations, south at 14, west at 9, southeast at 4, and north, northeast and northwest at one station each.

## CLOUDINESS.

The average number of clear days was 14, of partly cloudy days 12, and of cloudy days five.

## MISCELLANEOUS PHENOMENA.

**DENSE FOGS.**—At Camden on the 27th.

**LIGHT FROSTS.**—At Catawba on the 1st, 11th; at Cheraw on the 12th; at Newberry on the 2nd, 3rd, 4th; at Winthrop College on the 2nd.

**SOLAR HALOS.**—At Camden on the 17th, 25th, 26th; at Santuc on the 17th, 26th.

**LUNAR HALOS.**—At Blackville, Winthrop College on the 27th; at Camden on the 2nd, 3rd; at Charleston on the 1st, 2nd; at Columbia on the 2nd, 28th; at Little Mountain on the 28th.

**HAIL.**—At Batesburg, Camden on the 1st; at Beaufort on the 18th; at Kingstree on the 28th; at Pinopolis on the 17th; at Summerville on the 30th; at Trenton on the 19th.

**HIGH WINDS.**—At Blackville on the 30th; at Camden, Charleston, Cheraw, Columbia, Georgetown, Liberty, Newberry, Winthrop College on the 1st; at Saluda on the 20th.

NOTE.—All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. † Maximum thermometer not standard. ‡ Minimum thermometer not standard. § Exposed non-registering thermometer not standard. \* On other dates also. a. Indicates 1 day missing; b, 2 days, etc. ° The state of sky at 8 a. m. not used in averages.

DAILY MAXIMUM AND MINIMUM TEMPERATURES DURING MAY, 1909.

[illegible]

\* At these stations thermometers are read in the morning; the maximum temperatures then observed appear in the maximum column for the preceding day on which it nearly always occurs.

**SHADES OF SHADES IN INCHES.**

NOTE: The Index from August, 1898, to Annual, 1905, was published in the Annual for 1905.

NEW FORM OF PUBLICATION.

With this issue the publication of the Monthly Climatological Report of this section ends. The data from this section will, in future, be printed in the Weather Review, issued monthly at the Central Office at Washington, D. C., in similar form, except that the number of stations showing the daily temperature records will be somewhat limited.

This plan has been adopted as a means of placing before those interested in such matters the complete climatic data for certain well defined areas, which, according to the present manner of publication, can only be found in the reports from several different sections.

The country has been divided into 12 great divisions, outlined chiefly according to the drainage areas, and the entire data for each division will be brought together and published in convenient form for use of those interested in climatic data.

The 12 separates containing data for the entire country will finally be brought together to form a single publication monthly.

All persons now receiving the monthly summaries will be furnished, if desired, with separates of the division in which they are located. The complete Review, being a comprehensive presentation of the principal features of the weather of each month, will be furnished to cooperating meteorological bureaus, societies, libraries, etc., upon direct application to the Chief U. S. Weather Bureau, Washington, D. C.

GENERAL SUMMARY.

The temperature was above the normal, the month having been the third warmest June of record. The highest maximum equalled the record; no low night temperatures were recorded, the lowest minimum having been the highest of record.

The precipitation was above the normal, being the fourth wettest June of record, the same month in 1900, 1903, and 1906 having received heavier rainfall. The geographical distribution was poor, the extreme western portion having excessive amounts, and the southern coast section received less than 2 inches, or only about one-third the normal amount. The percentage of sunshine was below the normal.

TEMPERATURE.

The mean temperature was 79.2°, which is 1.2° above the normal. The highest local mean was 81.4° at Beaufort and Florence, the lowest was 75.1° at Greenville. The monthly extremes were 105° at Florence on the 27th, and 58° at Darlington on the 16th, making the State range 47°. The greatest local monthly range was 44° at Florence; the least was 24° at Charleston. The mean of the daily maximum temperatures was 90.5°, and of the daily minimum temperatures was 68.8°, making the average daily range 21.7°.

PRECIPITATION.

The average precipitation was 6.87 inches, which is 1.82 inches above the normal. The greatest local monthly amount was 12.42 inches at Anderson; the least was 1.64 inches at Charles-

ton. The greatest 24-hour rainfall was 4.90 inches at Blairs and Little Mountain on the 3d-4th. The average number of rainy days was 12, ranging from 6 days at Aiken, Allendale, and Chappells to 19 at Liberty.

**EXCESSIVE PRECIPITATION:** At Allendale on the 18th, 3.21 inches in 24 hours; at Anderson on the 3d, 3.79 inches in 24 hours; at Blackville on the 16th, 3.26 inches in 7 hours; at Blairs on the 3d-4th, 4.90 inches in 24 hours; at Camden (1) on the 3d, 2.57 inches in 13 hours; at Camden (2) on the 3d-4th, 3.70 inches in 19 hours; at Catawba on the 3d-4th, 3.90 inches in 24 hours; at Clemson College on the 3d, 3.85 inches in 24 hours; at Greenville on the 26th-27th, 3.04 inches in 24 hours; at Greenwood on the 3d-4th, 2.54 inches in 24 hours; at Heath Springs on the 3d, 3.56 inches in 24 hours; at Liberty on the 3d, 3.05 inches in 24 hours; at Little Mountain on the 3d, 4.90 inches in 24 hours; at Newberry on the 3d, 2.98 inches in 24 hours; at Pelzer on the 3d-4th, 3.46 inches in 24 hours; at St. Matthews on the 17th, 3.07 inches in 24 hours; at Saluda on the 3d, 3.07 inches in 24 hours; at Santuc on the 3d, 3.27 inches in 14 hours; at Spartanburg on the 3d-4th, 3.55 inches in 24 hours; at Trenton on the 3d, 2.83 inches in 24 hours; at Trial on the 21st, 3.35 inches in 1 hour and 30 minutes; at Walhalla on the 3d, 3.29 inches in 24 hours; at Winsboro on the 3d, 2.58 inches in 24 hours; at Winthrop College on the 3d, 3.48 inches in 24 hours.

#### WIND.

The prevailing wind was southwest at 21 stations, south at 10 stations, west at 7 stations, southeast at 6 stations, east at 2 stations, and north and northwest at 1 station each.

#### CLOUDINESS.

The average number of clear days was 10; of partly cloudy days 14, and of cloudy days 6.

#### River Gage Readings, June, 1909.

NOTE.—All records are used in determining State means, but the mean departures from normal temperature and precipitation are based only on records from stations that have ten or more years of observation. † Maximum thermometer not standard. ‡ Minimum thermometer not standard. § Exposed non-registering thermometer not standard. \* On other dates also. a, Indicates 1 day missing; b, 2 days, etc. ° The state of sky at 8 a. m. not used in averages.

DAILY MAXIMUM AND MINIMUM TEMPERATURES DURING JUNE, 1909.

[illegible]

\* At these stations thermometers are read in the morning; the maximum temperatures then observed appear in the maximum column for the preceding day on which it nearly always occurs. The data for Sindore and Mendota taken in March and April 1904 are given in Table 1.
